be contextualized by exploring other contemporaneous developments particularly in archaeology On the periphery of both there are various strands of esoteric thought and pseudoscientific theories which paint an alternative view of monumental remains and these also play a part in the background The discipline of archaeology has had an unbroken lineage from the late 19th century to the present On the other hand archaeoastronomy has not been consistently titled having adopted various different names such as alignment studies orientation theory astro archaeology megalithic science archaeotopography archaeoastronomy and cultural astronomy names which depict variants of its methods and theory sometimes in tandem with those of archaeology and sometimes in opposition Similarly its academic status has always been unclear so to bring it closer to archaeology there was a proposal in 2015 to integrate archaeoastronomy research with that of archaeology and call it skyscape archaeology This volume will examine how all these different variants came about and consider archaeoastronomy's often troubled relationship with archaeology and its appropriation by esotericism to shed light on its position today
