

Public Finance

Why Study Public Finance?

- **Public Finance**: is the study of the role of the **government** in the **economy**
- **Four Questions of Public Finance**
 - **When** should the government **intervene** in the economy?
 - **How** might the government **intervene**?
 - **What** are the **effects** of such interventions on **economic outcomes**?
 - **Why** do governments intervene in the way they do?

When Should the Government Intervene?

- A **trade** is **efficient** if it makes at least one party better off without making the other worse off
 - Total efficiency of economy is max. when the maximum number of efficient trades take place
 - This is very nice, but often there is a **market failure**
- In cases of a **market failure** => **problem** that causes the market economy to deliver an outcome that **does not maximise efficiency** => e.g. example of professor not getting a vaccine
 - Problem that causes the market to **deliver** an outcome that **does not maximise efficiency**

The Measles Epidemic of 1989–1991

- ▶ After the measles vaccine was introduced in 1963, measles cases had become relatively rare in the U.S. by the 1980s. Over the period from 1989 to 1991, however, there was a huge resurgence in measles.
- ▶ It is clear that this outbreak resulted from very low immunization rates among disadvantaged inner-city youths.
 - These unimmunized children were imposing a negative externality on other children who had received their immunizations but for whom immunization may have worn off.
- ▶ The federal government responded to this health crisis in the early 1990s:
 - The government publicly encouraged parents to get their children immunized.
 - The government also paid for the vaccines for low-income families.

The result was impressive. Immunization rates, which had never been above 70% before the epidemic, rose to 90% by 1995. Government intervention clearly reduced this negative externality.

- **Redistribution**:
 - **Shifting** of resources from some groups of society to others
 - Entails **efficiency losses** => individuals shift their behaviour away from efficiency-maximising point
 - **Trade-off** between **size** and **distribution** of the pie => **equity-efficiency trade-off**

How Might the Government Intervene?

- **Tax** or **Subsidise** private sale or purchase
 - **Taxes**: government intervenes by **increasing** the price for private sales or purchases of goods that are **over-produced**
 - **Subsidies**: government intervenes by **decreasing** the price for private sales or purchases of goods that are **under-produced**
- **Restrict** or **Mandate** private sale or purchase
 - It can **directly restrict** the private sale or purchase of goods that are **overproduced**
 - It can **mandate** the **private purchase** of goods that are **under-produced** and **force** individuals to buy that good (e.g. health insurance in some countries)

Municipal Reference Library Notes ,1952 **Behavioral Public Finance** Joel Slemrod,2006-01-23 Behavioral economics questions the basic underpinnings of economic theory showing that people often do not act consistently in their own self interest when making economic decisions While these findings have important theoretical implications they also provide a new lens for examining public policies such as taxation public spending and the provision of adequate pensions How can people be encouraged to save adequately for retirement when evidence shows that they tend to spend their money as soon as they can Would closer monitoring of income tax returns lead to more honest taxpayers or a more distrustful uncooperative citizenry Behavioral Public Finance edited by Edward McCaffery and Joel Slemrod applies the principles of behavioral economics to government s role in constructing economic and social policies of these kinds and suggests that programs crafted with rational participants in mind may require redesign Behavioral Public Finance looks at several facets of economic life and asks how behavioral research can increase public welfare Deborah A Small George Loewenstein and Jeff Strnad note that public support for a tax often depends not only on who bears its burdens but also on how the tax is framed For example people tend to prefer corporate taxes over sales taxes even though the cost of both is eventually extracted from the consumer James J Choi David Laibson Brigitte C Madrian and Andrew Metrick assess the impact of several different features of 401 k plans on employee savings behavior They find that when employees are automatically enrolled in a retirement savings plan they overwhelmingly accept the status quo and continue participating while employees without automatic enrollment typically take over a year to join the saving plan Behavioral Public Finance also looks at taxpayer compliance While the classic economic model suggests that the low rate of IRS audits means far fewer people should voluntarily pay their taxes than actually do John Cullis Philip Jones and Alan Lewis present new research showing that many people do not underreport their incomes even when the probability of getting caught is a mere one percent Human beings are not always rational utility maximizing economic agents Behavioral economics has shown how human behavior departs
