

ACTIVITY-BASED COSTING

PROBLEM 1

Duckhorn Housecleaning provides housecleaning services to its clients. The company uses an activity-based costing system for its overhead costs. The company has provided the following data from its activity-based costing system.

<i>Activity Cost Pool</i>	<i>Total Cost</i>	<i>Total Activity</i>
Cleaning.....	\$645,576	72,700 hours
Job support	\$129,546	5,400 jobs
Client support	\$ 20,900	760 clients
Other	<u>\$110,000</u>	Not applicable
Total.....	<u>\$906,022</u>	

The "Other" activity cost pool consists of the costs of idle capacity and organization-sustaining costs.

One particular client, the Lumbard family, requested 31 jobs during the year that required a total of 62 hours of housecleaning. For this service, the client was charged \$1,620

Required:

- Compute the activity rates (i.e., cost per unit of activity) for the activity cost pools. Round off all calculations to the nearest whole cent.
- Using the activity-based costing system, compute the customer margin for the Lumbard family. Round off all calculations to the nearest whole cent.
- Assume the company decides instead to use a traditional costing system in which ALL costs are allocated to customers on the basis of cleaning hours. Compute the margin for the Lumbard family. Round off all calculations to the nearest whole cent.

PROBLEM 2

TriCo would like to institute an activity-based costing system to price products. The company's Purchasing Department incurs costs of \$550,000 per year and has six employees. Purchasing has determined the three major activities that occur during the year.

<i>Activity</i>	<i>Allocation Measure</i>	<i># of People</i>	<i>Total Cost</i>
Issuing purchase orders	# of purchase orders	1	\$150,000
Reviewing receiving reports	# of receiving reports	2	\$175,000
Making phone calls	# of phone calls	3	\$225,000

During the year 50,000 phone calls were made in the department; 15,000 purchase orders

Time-Driven Activity-Based Costing Robert S. Kaplan, Steven R. Anderson, 2007-02-22 In the classroom ABC looks like a great way to manage a company's resources But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating Why The employee surveys that companies used to estimate resources required for business activities proved too time consuming expensive and irritating to employees This book shows you how to implement time driven activity based costing TDABC an easier and more powerful way to implement ABC You can now estimate directly the resource demands imposed by each business transaction product or customer The payoff You spend less time and money obtaining and maintaining TDABC data and more time addressing problems that TDABC reveals such as inefficient processes unprofitable products and customers and excess capacity The authors also show how to use TDABC to link strategic planning to operational budgeting to enhance the due diligence process for mergers and acquisitions and to support continuous improvement activities such as lean management and benchmarking In presenting their model the authors define the two questions required to build TDABC 1 How much does it cost per time unit to supply resource capacity for each business process 2 How much resource capacity time is required to perform work for a company's many transactions products and customers The book demonstrates how to develop simple valid answers to these two questions Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies in diverse settings based on actual implementations
