Mathematical Analysis and Applications Hemen Dutta, 2020-12-22 Topics in Contemporary Mathematical Analysis and Applications encompasses several contemporary topics in the field of mathematical analysis their applications and relevancies in other areas of research and study The readers will find developments concerning the topics presented to a reasonable extent with various new problems for further study Each chapter carefully presents the related problems and issues methods of solutions and their possible applications or relevancies in other scientific areas Aims at enriching the understanding of methods problems and applications Offers an understanding of research problems by presenting the necessary developments in reasonable details Discusses applications and uses of operator theory fixed point theory inequalities bi univalent functions functional equations and scalar objective programming and presents various associated problems and ways to solve such problems This book is written for individual researchers educators students and department libraries **The Metric Theory of Tensor Products** Joseph Diestel, Alexandre Grothendieck, Jan H. Fourie, Johan Swart, 2008-01-01 Famed mathematician Alexander Grothendieck in his Resume set forth his plan for the study of the finer structure of Banach spaces He used tensor products as a foundation upon which he built the classes of operators most important to the study of Banach spaces and established the importance of the local theory in the study of these operators and the spaces they act upon When Linton Strauss and Pelczynski addressed his work at the rebirth of Banach space theory they shed his Fundamental Inequality in the trappings of operator ideals by shedding the tensorial formulation The authors of this book however feel that there is much of value in Grothendieck's original formulations in the Resume and here endeavor to expose the Resume by presenting most of Grothendieck's arguments using the mathematical tools that were available to him at the time *Positivity and Noncommutative Analysis* Gerard Buskes, Marcel de Jeu, Peter Dodds, Anton Schep, Fedor
