

# Computer Skills interview questions and answers related to hardware troubleshooting

**Q**

Describe the steps you would take to diagnose a computer that is running unusually slow.

To diagnose a slow-running computer, I would start by checking the system's resource usage via Task Manager to identify any programs using excessive CPU or memory. I would also check for available disk space, as a nearly full hard drive can slow down performance.

**A**

Next, I would ensure that the operating system and drivers are up-to-date, as outdated software can cause slowdowns. Additionally, I would run a malware scan to rule out the possibility of a virus affecting the system's performance.

Look for candidates who can outline a logical and comprehensive approach to diagnosing and resolving performance issues. They should consider multiple potential causes and prioritize steps based on likelihood and impact.
