The Ethical Challenges of Academic Administration Elaine E. Englehardt, Michael S. Pritchard, Kerry D. Romesburg, Brian Schrag, 2009-09-18 This book is an invitation to academic administrators at every level to engage in reflection on the ethical dimensions of their working lives Academics are very good at reflecting on the ethical issues in other professions but not so interested in reflecting on those in their own including those faced by faculty and administrators Yet it is a topic of great importance Academic institutions are value driven hence virtually every decision made by an academic administrator has an ethical component with implications for students faculty the institution and the broader community Despite this they receive little systematic preparation for this aspect of their professional lives when they take up administrative posts especially when compared to say medical or legal training Surprisingly little has been written about the ethical challenges that academic administrators are likely to face Most of the literature relating to academic administration focuses on leadership and draws heavily on management and social science theory The importance of focusing on ethical deliberation and decision making often goes unrecognized

Engineering Ethics Charles Edwin Harris, Michael S. Pritchard, Michael Jerome Rabins, 1995 This book helps engineering students carry over their natural analytical talents into a new area moral deliberation It shows them the importance of being analytical by stressing that many apparent moral disagreements are really disagreements over the facts or over the definitions of crucial terms and that the locus of moral disagreement can only be discovered by analysis Since engineers are interested in real world problems the text catches the attention of students in the field by focusing on cases that hit the front pages of newspapers e g the Challenger disaster and the Ford Pinto gas tank as well as those more typical of the sort they are likely to encounter in their own careers

The Engineering Project Gene Moriarty, 2015-11-05 We all live our daily lives surrounded by the products of technology that make what we do simpler faster and more efficient These are benefits we often just take for granted But at the same time as these products disburden us of unwanted tasks that consumed much time and effort in earlier eras many of them also leave us more disengaged from our natural and even human surroundings It is the task of what Gene Moriarty calls focal engineering to create products that will achieve a balance between disburdenment and engagement How much disburdenment will be appropriate while still permitting an engagement that enriches one s life elevates the spirit and calls forth a good life in a convivial society One of his examples of a focally engineered structure is the Golden Gate Bridge which draws people to it enlivens and elevates the human spirit and resonates with the world of its congenial setting Humans bridge and world are in tune These values of engagement enlivenment and resonance are key to the normative approach Moriarty brings to the profession of engineering which traditionally has focused mainly on technical measures of evaluation such as efficiency productivity objectivity and precision These measures while important look at the engineered product in a local and limited sense But from a broader perspective what is locally benign may present serious moral problems undermining social justice environmental sustainability and health and safety of affected parties It is this broader perspective that is championed by focal engineering the subject of Part III of the book which Moriarty contrasts with modern engineering in Part I and pre modern engineering in Part II
