

Taste & Smell Lab

Standard: SA-PS-3: Describe how the body perceives internal and external stimuli and responds to maintain a stable internal environment, as it relates to biofeedback.

Learning Target: Explain how individuals experience olfaction and gustation.

Safety: Please inform your instructor of any food allergies.

Overview:

The human body has sense organs that correspond to the five recognized senses: sight, hearing, taste, smell, and touch. The taste buds—small structures found mostly on the tongue—are the organs of taste. This experiment explores the relationship between taste and the other senses by asking subjects to identify tastes without the use of their eyes or noses. The sense of taste is partially dependent on other senses.

Materials:

- 2 of each food sample for each taste-tester
- 2 paper plates
- Paper towels
- Blind fold & nose clip for each taste-tester (if available)
- 1 cup of water for each taste-tester

Procedure:

1. Decide who in your group will be the taste-testers (each group should have at least two taste-testers). Taste-testers should not have any food allergies and will need to keep their eyes closed or wear a blindfold for the experiment.
2. Collect your materials for this experiment. Keep the plate of samples covered with a second plate to hide the food samples. Do not tell the taste-testers which foods they will be testing.
3. Trial 1: For each sample, have the taste-testers hold their noses while they sample the first cube of one of the foods you have prepared. Ask each tester to identify the food being sampled. Do not tell your subjects if they are correct until the end of the entire experiment. Record the answer on the data table (place a Y in the box if the subject answers correctly, place an N and note the guess if he or she does not answer correctly). Have each subject nose his or her mouth out after tasting each food. Repeat this procedure, one cube at a time, until all the foods have been sampled once by each tester.
4. Trial 2: Repeat the experiment, but this time, do not have the testers hold their noses. Serve the samples in a different order than the first trial, so that the testers cannot rely on
