Effective GUI Testing Automation Kanglin Li, Mengqi Wu, 2006-07-14 Have you tried using an automated GUI testing tool only to find that you spent most of your time configuring adjusting and directing it This book presents a sensible and highly effective alternative it teaches you to build and use your own truly automated tool The procedure you ll learn is suitable for virtually any development environment and the tool allows you to store your test data and verification standard separately so you can build it once and use it for other GUIs Most if not all of your work can be done without test scripts because the tool itself can easily be made to conduct an automatic GUI survey collect test data and generate test cases You ll spend virtually none of your time playing with the tool or application under test Code intensive examples support all of the book s instruction which includes these key topics Building a C API text viewer Building a test monkey Developing an XML

viewer using XPath and other XML related classes Building complex serializable classes for GUI test verification

software that is as bug free as possible *Improving Software Testing* Tim A. Majchrzak,2012-02-03 Software is
continuously increasing in complexity Paradigmatic shifts and new development frameworks make it easier to implement
software but not to test it Software testing remains to be a topic with many open questions with regard to both technical low
level aspects and to the organizational embedding of testing However a desired level of software quality cannot be achieved
by either choosing a technical procedure or by optimizing testing processes In fact it requires a holistic approach This Brief
summarizes the current knowledge of software testing and introduces three current research approaches The base of
knowledge is presented comprehensively in scope but concise in length thereby the volume can be used as a reference
Research is highlighted from different points of view Firstly progress on developing a tool for automated test case generation
TCG based on a program s structure is introduced Secondly results from a project with industry partners on testing best
practices are highlighted Thirdly embedding testing into e assessment of programming exercises is described Automated
