innovative processes Many useful composites are envisaged by materials scientists but the problem of how to make them is
often the greater hurdle This process oriented book focuses on the basic principles of composite fabrication Upon studying
these processes one is immediately struck by the diversity of ideas and techniques In some cases these have been borrowed
from other technologies and were designed for use with quite different materials In other cases some very clever new means
have been developed which take account of the characteristics of metals and ceramics and the higher temperatures which
