Control, operation and trading strategies of intermittent renewable energy in smart grids Dongliang Xiao, Biyun Chen, Xueqian Fu, Zhiyi Li, Chun Wei, Dan Lu, 2023-04-17 *Global Supply Chain Performance and Risk Optimization* Rob Smith, 2012-12-06 This doctoral dissertation deals with a very timely and important topic in the fields of international operations finance and risk management namely the evaluation of the Real Option value of operational and managerial flexibility within a global supply chain network The author who has worked for more than nine years on international supply chain strategy and design as an executive in world class automotive and high tech companies in the U S and in Europe uses a large scale data set from an existing global supply chain operated by a tier one supplier in the global automotive industry in examining and comparing the following supply chain strategies single sourcing dual sourcing compliance with local content rules centers of excellence and Real Options with flexibility in sourcing production and distribution logistics The major finding of this empirical study is the identification of a Real Options strategy that results in a positive payback in less than a year and dominates all of the other supply chain strategies The three main contributions of this work are i for the first time a comprehensive and real data set is utilized to quantify and demonstrate the financial performance of various supply chain design strategies ii a new model of real price changes i e

Supply Chain Management Dr. Md. Mamun Habib, 2011-09-12 Supply Chain Management SCM has been widely researched in numerous application domains during the last decade Despite the popularity of SCM research and applications considerable confusion remains as to its meaning There are several attempts made by researchers and practitioners to appropriately define SCM Amidst fierce competition in all industries SCM has gradually been embraced as a proven managerial approach to achieving sustainable profits and growth This book Supply Chain Management Applications and Simulations is comprised of twelve chapters and has been divided into four sections Section I contains the introductory chapter that represents theory and evolution of Supply Chain Management This chapter highlights chronological prospective of SCM in terms of time frame in different areas of manufacturing and service industries Section II comprised five chapters those are related to strategic and tactical issues in SCM Section III encompasses four chapters that are relevant to project and technology issues in Supply Chain Section IV consists of two chapters which are pertinent to risk managements in supply chain

Complementarity Modeling in Energy Markets Steven A. Gabriel, Antonio J. Conejo, J. David Fuller, Benjamin F. Hobbs, Carlos Ruiz, 2012-07-20 This addition to the ISOR series introduces complementarity models in a straightforward and approachable manner and uses them to carry out an in depth analysis of energy markets including formulation issues and solution techniques In a nutshell

complementarity models generalize a optimization problems via their Karush Kuhn Tucker conditions b on cooperative games in which each player may be solving a separate but related optimization problem with potentially overall system constraints e g market clearing conditions c onomic and engineering problems that aren t specifically derived from optimization problems e g spatial price equilibria d roblems in which both primal and dual variables prices appear in the original formulation e g The National Energy Modeling System NEMS or its precursor PIES As such complementarity models are a very general and flexible modeling format A natural question is why concentrate on energy markets for this complementarity approach s it turns out energy or other markets that have game theoretic aspects are best modeled by complementarity problems The reason is that the traditional perfect competition approach no longer applies due to deregulation and restructuring of these markets and thus the corresponding optimization problems may no longer hold Also in some instances it is important in the original model formulation to involve both primal variables e g production as well as dual variables e g market prices for public and private sector energy planning Traditional optimization problems can not directly handle this mixing of primal and dual variables but complementarity models can and this makes them all that more effective for decision makers
