who aspire to be effective thinkers in society **Improving Human Learning in the Classroom** George R. Taylor, Loretta MacKenney, 2008-10-03 *Improving Human Learning in the Classroom* provides a functional and realistic approach to facilitate learning through a demonstration of commonalities between the various theories of learning. Designed to assist educators in eliciting students' prior knowledge, providing feedback, transfer of knowledge, and promoting self-assessment, Taylor and MacKenney provide proven strategies for infusing various learning theories into a curriculum, guiding educators to find their own strategies for promoting learning in the classroom. Both quantitative and qualitative research methods investigate learning theories and reforms in education. Quantitative data sources build the theoretical framework for educating the student as well as developing strategies for closing the achievement gap. Taylor and MacKenney fuse personal experiences with solid strategies for human learning. Developing Critical Thinking Skills Kimberly S. Poulter, 1993

Parental Roles in Developing Metacognitive Skills, 1986. Metacognitive skills are defined and their development discussed. The role of parents in this development is considered and the importance of such skills emphasized. In order to evaluate ways in which the development of learning and thinking skills might be facilitated, a pilot study was carried out with the specific aim of investigating whether the explicit teaching of certain critical thinking skills in the home was feasible and whether it could accelerate the development of critical thinking in a group of ten 9-year-old boys. The subjects were given a test of critical thinking before and after a series of discussions with adults in which critical thinking was not only required but taught overtly. Results supported the hypothesis that there would be an increase in the frequency with which the children supported and justified their statements during problem solving and decision making and that the frequency of responses reflecting their monitoring of their own thinking and problem solving would increase. Eight of the ten boys demonstrated a significant increase in the use of monitoring and critical thinking strategies between pre and posttest. The implications of this study are discussed and modifications needed for a larger scale investigation are outlined. Developing Effective Military

Conference, 1985 Using Human Learning Strategies in the Classroom George R. Taylor, 2002. This book provides a realistic approach to applying human learning in the classroom. It is designed for the teacher who is aware of many different theories of learning and who might like to learn methods of transposing these theories to the classroom. No knowledge of any kind of psychological pedagogy is required. Professor Taylor's experience culled through over 30 years in the field combined with his flair for easily explaining complex matters makes an invaluable reading experience for today's teacher.
