Managing the Software Process Watts S. Humphrey, 1999      *Software Security Engineering* Nancy R. Mead, Julia H. Allen, Sean Barnum, Robert J. Ellison, Gary R. McGraw, 2004-04-21 Software Security Engineering draws extensively on the systematic approach developed for the Build Security In BSI Web site Sponsored by the Department of Homeland Security Software Assurance Program the BSI site offers a host of tools guidelines rules principles and other resources to help project managers address security issues in every phase of the software development life cycle SDLC The book s expert authors themselves frequent contributors to the BSI site represent two well known resources in the security world the CERT Program at the Software Engineering Institute SEI and Cigital Inc a consulting firm specializing in software security This book will help you understand why Software security is about more than just eliminating vulnerabilities and conducting penetration tests Network security mechanisms and IT infrastructure security services do not sufficiently protect application software from security risks Software security initiatives should follow a risk management approach to identify priorities and to define what is good enough understanding that software security risks will change throughout the SDLC Project managers and software engineers need to learn to think like an attacker in order to address the range of functions that software should not do and how software can better resist tolerate and recover when under attack      **The CERT Oracle Secure Coding Standard for Java** Fred Long, 2012 In the Java world security is not viewed as an add on a feature It is a pervasive way of thinking Those who forget to think in a secure mindset end up in trouble But just because the facilities are there doesn t

mean that security is assured automatically A set of standard practices has evolved over the years The Secure Coding Standard for Java™ is a compendium of these practices These are not theoretical research papers or product marketing blurbs This is all serious mission critical battle tested enterprise scale stuff James A Gosling Father of the Java Programming Language An essential element of secure coding in the Java programming language is a well documented and enforceable coding standard Coding standards encourage programmers to follow a uniform set of rules determined by the requirements of the project and organization rather than by the programmer's familiarity or preference Once established these standards can be used as a metric to evaluate source code using manual or automated processes The CERT Oracle Secure Coding Standard for Java™ provides rules designed to eliminate insecure coding practices that can lead to exploitable vulnerabilities Application of the standard's guidelines will lead to higher quality systems robust systems that are more resistant to attack Such guidelines are required for the wide range of products coded in Java for devices such as PCs game players mobile phones home appliances and automotive electronics After a high level introduction to Java application security seventeen consistently organized chapters detail specific rules for key areas of Java development For each area the authors present noncompliant examples and corresponding compliant solutions show how to assess risk and offer references for further information Each rule is prioritized based on the severity of consequences likelihood of introducing exploitable vulnerabilities and cost of remediation The standard provides secure coding rules for the Java SE 6 Platform including the Java programming language and libraries and also addresses new features of the Java SE 7 Platform It describes language behaviors left to the discretion of JVM and compiler implementers guides developers in the proper use of Java's APIs and security architecture and considers security concerns pertaining to standard extension APIs from the javax package hierarchy The standard covers security issues applicable to these libraries lang util Collections Concurrency Utilities Logging Management Reflection Regular Expressions Zip I O JMX JNI Math Serialization and JAXP
