

Real-World Biology: Analysis, Extending Our Senses continued

Part B: Using Microscopes to Examine Evidence

The Student Council room at Central High has been set up for a crime scene investigation. Three weeks ago, Mrs. Sarah Roberts, the biology teacher, was writing a test in the lab. Her lunch was on the table where she was working. Suddenly, the fire alarm rang. Mrs. Roberts promptly left the building and, in her haste, left the lab door open. She was surprised to see a large group of people outside the building, most of them with animals. She thought this was a little unusual but soon forgot about it. When Mrs. Roberts returned to the lab, she found that her lunch was missing.

She looked around the room and saw some things that had not been there when she left. There was some kind of debris on the floor. A small piece of human skin was stuck to a broken beaker. Nearby was a trail of blood. The security chief arrived, collected the three pieces of evidence, and ordered laboratory reports on each. The laboratory used microscopes to examine the skin and blood samples. The security chief then apprehended four suspects. All were in the vicinity of the building on the day of the theft. The following information is listed on the evidence bulletin board. You must use this information to determine who stole the lunch bag.

Background Information

Red blood cells of mammals do not have nuclei.

Red blood cells of nonmammals have nuclei.

Cancer cells lack contact inhibition. They continue to grow, forming layers of cells. The cells grow randomly in culture.

Normal skin cells grow in culture until they physically come in contact with each other. Growth then stops. This is called contact inhibition. The cells do not grow randomly, but are oriented in a particular direction.

Laboratory Test Results

Debris from the floor: sand and hay

Blood sample: Red blood cells have nuclei.

Skin sample: Was cultured; cells were found to have contact inhibition and be oriented in a particular direction.

Suspects

Suspect 1

- Spends weekends on the beach
- Works as a dishwasher
- Is being treated for skin cancer
- Has a poodle named Fifi with a bandaged leg

Suspect 2

- Works in a stone quarry
- Doesn't go anywhere without his pet frog, Croak, last seen with a bandaged webbed foot

Suspect 3

- Lives on a farm
- Recently spent a week at the shore
- Never goes anywhere without her bird, Polly, last seen nursing a hurt wing

Suspect 4

- Lives on Main Street above the bagel shop
- Said he shaves hourly
- Has a pet iguana that he recently took to the vet

Intelligent Data Analysis for Real-Life Applications: Theory and Practice Magdalena-Benedito, Rafael, 2012-06-30
With the recent and enormous increase in the amount of available data sets of all kinds applying effective and efficient techniques for analyzing and extracting information from that data has become a crucial task Intelligent Data Analysis for Real Life Applications Theory and Practice investigates the application of Intelligent Data Analysis IDA to these data sets through the design and development of algorithms and techniques to extract knowledge from databases This pivotal reference explores practical applications of IDA and it is essential for academic and research libraries as well as students researchers and educators in data analysis application development and database management

Ecological Mechanics Mark Denny, 2015-12-29 An in depth exploration of how biomechanics and ecology work together Plants and animals interact with each other and their surroundings and these interactions with all their complexity and contingency control where species can survive and reproduce In this comprehensive and groundbreaking introduction to the emerging field of ecological mechanics Mark Denny explains how the principles of physics and engineering can be used to understand the intricacies of these remarkable relationships Denny opens with a brief review of basic physics before introducing the fundamentals of diffusion fluid mechanics solid mechanics and heat transfer taking care to explain each in the context of living organisms Why are corals of different shapes on different parts of a reef How can geckos climb sheer walls Why can birds and fish migrate farther than mammals How do desert plants stay cool The answers to these and a host of similar questions illustrate the principles of heat mass and momentum transport and set the stage for the book s central topic the application of these principles in ecology Denny shows how variations in the environment in both space and time affect the performance of plants and animals He introduces spectral analysis a mathematical tool for quantifying the patterns in which environments vary and uses it to analyze such
