**Spatial Databases**, 2007 Spatial database research has continued to advance greatly since three decades ago addressing the growing data management and analysis needs of spatial applications This research has produced a taxonomy of models for space conceptual models spatial query languages and query processing spatial file organization and indexes and spatial data mining However emerging needs for spatial database systems include the handling of 3D spatial data temporal dimension with spatial data and spatial data visualization In addition the rise of new systems such as sensor networks and multi core processors is likely to have an impact in spatial databases The goal of this paper is to provide a broad overview of the recent advancements in spatial databases and research needs in each area [Encyclopedia of Database Technologies and Applications](#) Rivero, Laura C.,Doorn, Jorge Horacio,Ferraggine, Viviana E.,2005-06-30 Addresses the evolution of database management technologies and applications along with the progress and endeavors of new research areas P xiii [Spatial Databases](#) Philippe Rigaux,Michel Scholl,Agnès Voisard,2002 The authors explore and explain current techniques for handling the specialised data that describes geographical phenomena in a study that will be of great value to computer scientists and geographers working with spatial databases [Web and Wireless Geographical Information Systems](#) James D. Carswell,Stewart Fotheringham,Gavin McArdle,2009-11-30 This book constitutes the refereed proceedings of the 9th International Symposium on Web and Wirelsss Geographical Information Systems W2GIS 2009 held in Maynooth Ireland in December 2009 The 12 revised full papers presented together with two invited talks were carefully reviewed and selected from numerous submissions The papers span a wide area including but not limited from geospatial analysis and personalization and semantic geo spatial web to W2GIS case studies and web and mobile applications and prototypes

**Handbook of e-Tourism** Zheng Xiang,Matthias Fuchs,Ulrike Gretzel,Wolfram Höpken,2022-09-01 This handbook provides an authoritative and truly comprehensive overview both of the diverse applications of information and communication technologies ICTs within the travel and tourism industry and of e tourism as a field of scientific inquiry that has grown and matured beyond recognition Leading experts from around the world describe cutting edge ideas and developments present key concepts and theories and discuss the full range of research methods The coverage accordingly encompasses everything from big data and analytics to psychology user behavior online marketing supply chain and operations management smart business networks policy and regulatory issues and much much more The goal is to provide an outstanding reference that summarizes and synthesizes current knowledge and establishes the theoretical and methodological foundations for further study of the role of ICTs in travel and tourism The handbook will meet the needs of researchers and students in various disciplines as well as industry professionals As with all volumes in Springer s Major Reference Works program readers will benefit from access to a continually updated online version **GeoSpatial Semantics** Frederico Fonseca,M. Andrea Rodriguez,Sergei Levashkin,2007-11-17 This book constitutes the refereed

proceedings of the Second International Conference on GeoSpatial Semantics GeoS 2007 held in Mexico City Mexico in November 2007 The papers are organized in topical sections on models and languages for geo ontologies alignment and integration of geo ontologies ontology based spatial information retrieval formal representation for geospatial data and integration of semantics into spatial query processing

**Design and Implementation of Large Spatial Databases**, 1990

The most recent developments in spatial data management are reported in these proceedings SSD 89 brought together computer scientists and experts from application areas such as geography computer vision robotics computer aided manufacturing and environmental information systems This proceedings volume includes subjects such as extensible database systems spatial data structures an index structures spatial reasoning geographic information systems quadtrees and thematic map modeling Publisher s website

Journal on Data Semantics XI Jeff Z. Pan, Philippe Thiran, Terry Halpin, Steffen Staab, Vojtech Svatek, Pavel Shvaiko, John F. Roddick, 2008-12-05 Papers were invited based on their quality relevance and significance and the ability of extending their results Extended versions prepared by authors were subject to the traditional two round scholarly review process and the authors were required to respond to all concerns expressed by the reviewers before papers were accepted Eight papers were eventually accepted for publication in this issue The selection of SWESE best papers eventually resulted in the acceptance of two papers The first paper Experiences in the Design of Semantic Services Using Web Engineering Methods and Tools by Brambilla Ceri Celino Cerizza Della Valle Facca Turati and Tzviskou shows how classical software engineering methods such as formal business process development and automatic code generation combine with semantic methods and tools i e ontology engineering semantic service annotation and discovery to forge a new approach to software development for the Semantic Web In the paper the authors present their experience in the participation to the Semantic Web Service Challenge 2006 where the proposed approach achieved very good results in solving the proposed problems The second paper Automatically Generated Model Transformations Using Ontology Engineering Space by Roser and Bauer presents an approach to using the Semantic technologies to improve cross organizational modeling by automated generation of model transformations By automated generation of mappings it offers new possibilities for the integration of domain specific languages and legacy models in a plug play manner making it easier for new organizations to join collaborations

*Spatial Database Systems* Albert K.W. Yeung,G. Brent Hall,2007-05-23 The decision to write this book

was motivated by a number of factors First although several useful textbooks on spatial databases have recently been published this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications Second much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and prior to this book no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume The tasks of sourcing and coherently integrating relevant contributions is daunting for students many of whom have a substantial number of competing demands placed on them This book should make the task of knowledge building less daunting Third and perhaps most importantly an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools Hence many courses are technical in nature and while they continue to produce technically adept students knowledge of the broader aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook Spatial Data Management Nikos Mamoulis,2022-06-01 Spatial database management deals with the storage indexing and querying of data with spatial features such as location and geometric extent Many applications require the efficient management of spatial data including Geographic Information Systems Computer Aided Design and Location Based Services The goal of this book is to provide the reader with an overview of spatial data management technology with an emphasis on indexing and search techniques It first introduces spatial data models and queries and discusses the main issues of extending a database system to support spatial data It presents indexing approaches for spatial data with a focus on the R tree Query evaluation and optimization techniques for the most popular spatial query types selections nearest neighbor search and spatial joins are portrayed for data in Euclidean spaces and spatial networks The book concludes by demonstrating the ample application of spatial data management technology on a wide range of related application domains management of spatio temporal data and high dimensional feature vectors multi criteria ranking data mining and OLAP privacy preserving data publishing and spatial keyword search Table of Contents Introduction Spatial Data Indexing Spatial Query Evaluation Spatial Networks Applications of Spatial Data Management Technology **pt.
