The Planets Dava Sobel:

The Planets Dava Sobel, 2006-10-31 Dava Sobel's *The Glass Universe* will be available from Viking in December 2016. With her bestsellers *Longitude* and *Galileo's Daughter*, Dava Sobel introduced readers to her rare gift for weaving complex scientific concepts into a compelling narrative. Now Sobel brings her full talents to bear on what is perhaps her most ambitious topic to date: the planets of our solar system. Sobel explores the origins and oddities of the planets through the lens of popular culture, from astrology, mythology, and science fiction to art, music, poetry, biography, and history. Written in her characteristically graceful prose, *The Planets* is a stunningly original celebration of our solar system and offers a distinctive view of our place in the universe. A New York Times extended bestseller, A Featured Alternate of the Book of the Month Club, History Book Club, Scientific American Book Club, and Natural Science Book Club. Includes 11 full-color illustrations by artist Lynette R. Cook. *The Planets* lets us fall in love with the heavens all over again. The New York Times Book Review: Playful, lyrical, a guided tour so imaginative that we forget we're being educated as we're being entertained. Newsweek: Sobel has outdone her extraordinary talent for keeping readers enthralled. *Longitude* and *Galileo's Daughter* were exciting enough, but *The Planets* has a charm of its own. A splendid and enticing book. San Francisco Chronicle: A sublime journey. Sobel's writing is as bright as the sun and its thinking as star-studded as the cosmos. The Atlanta Journal-Constitution: An incantatory serenade to the Solar System. Grade A Entertainment Weekly: Like Sobel's *Longitude* and *Galileo's Daughter*, *The Planets* combines masterful storytelling with clear, engaging explanations of the essential scientific facts. Physics World: The Planets Dava Sobel, 2005. Explores the creation and evolution of the solar system's planets through a lens of popular culture, drawing on sources from astrology, science fiction, the fine arts, and other genres to chronicle planetary history in an accessible format.

The Hunt for Planet X Govert Schilling, 2010-01-24. Ever since the serendipitous discovery of planet Uranus in 1871, astronomers have been hunting for new worlds in the outer regions of our solar system. This exciting and ongoing quest culminated recently in the discovery of hundreds of ice dwarfs in the Kuiper belt, robbed Pluto of its planet status, and led to a better understanding of the origin of the solar system. This timely book reads like a scientific who-done-it, going from the heights of discovery to the depths of disappointment in the hunt for Planet X. Based on many personal interviews with astronomers, the well-known science writer Govert Schilling introduces the heroes in the race to be the first in finding another world bigger than Pluto.

Home Learning Year by Year, Revised and Updated Rebecca Rupp, 2020-01-21. Curious Obsessions in the History of Science and Spirituality ATF Press,2020-12-09 The frontiers of religion and science have always been pushed forward by curious and obsessed individuals like the monk who kept banned books in a secret library under the nose of the pope the explorers who searched for the lost tribes of Israel but found a new continent instead the eccentric doctor and a mad monk who intuited scientific truths well before future generations would prove their theories correct the archaeologists who discovered the goddess just in time for feminism the utopians who never quite found what they were looking for and a current flock of priests and nuns who go wherever knowledge takes them It is a delicious quirk of history that individuals dismissed by their contemporaries as eccentrics and troublemakers are often those with the most impact on the world Curious Obsessions in the History of Science and Spirituality is a captivating look at the famous and the forgotten who emerged in times of extreme change and social disruption to change science and spirituality for ever During our current Covid19 pandemic this collection is highly relevant to a world still seeking novel answers to the human condition and also drawn to old theories long ago debunked

[The International Astronomical Union](#) Johannes Andersen,David Baneke,Claus Madsen,2019-02-20 The International Astronomical Union IAU was founded in 1919 in the wake of the First World War together with its sister Unions in related natural sciences It will thus turn 100 years in 2019 Written by a mixed team of insiders and outsiders this book presents the IAU in the changing context of the historical scientific and technological development of astronomy during the past 100 years While much important scientific progress took place already before 1945 the book naturally focuses on the accelerating evolution during the second half of the century In the past few decades the previously narrow IAU focus on organising

professional astronomy has broadened to include societally relevant activities such as addressing the hazard of asteroid impacts the planetary status of Pluto in the Solar System and the hugely successful International Year of Astronomy Most recently it is spearheading a combination of science literacy and public outreach The book will be of interest to professional astronomers as well as an astronomically interested general audience The book features live personal interviews with as many of the key actors as still possible Astronomy Now, 2006 **The Glass Universe** Dava Sobel, 2017 A biographical orrery intricate complex and fascinating The Observer A peerless intellectual biography The Glass Universe shines and twinkles as brightly as the stars themselves Economist Bestselling author Dava Sobel returns with a captivating little known true story of women in science Before they even had the right to vote a group of remarkable women were employed by Harvard College Observatory as Human Computers to interpret the observations made via telescope by their male counterparts each night The author of Longitude Galileo s Daughter and The Planets shines light on the hidden history of these extraordinary women who changed the burgeoning field of astronomy and our understanding of the stars and our place in the universe **Mercury**, 2005 The New Yorker Harold Wallace Ross, Katharine Sergeant Angell White, 2005-11

Is Pluto a Planet? David A. Weintraub, 2014-06-12 A Note from the Author On August 24 2006 at the 26th General Assembly of the International Astronomical Union IAU in Prague by a majority vote of only the 424 members present the IAU an organization of over 10 000 members passed a resolution defining planet in such a way as to exclude Pluto and established a new class of objects in the solar system to be called dwarf planets which was deliberately designed to include Pluto With the discovery of Eris 2003 UB313 an outer solar system object thought to be both slightly larger than Pluto and twice as far from the Sun astronomers have again been thrown into an age old debate about what is and what is not a planet One of many sizeable hunks of rock and ice in the Kuiper Belt Eris has resisted easy classification and inspired much controversy over the definition of planethood But Pluto itself has been subject to controversy since its discovery in 1930 and questions over its status linger Is it a planet What exactly is a planet Is Pluto a Planet tells the story of how the meaning of the word planet has changed from antiquity to the present day as new objects in our solar system have been discovered In lively thoroughly accessible prose David Weintraub provides the historical philosophical and astronomical background that allows us to decide for ourselves whether Pluto is indeed a planet The number of possible planets has ranged widely over the centuries from five to seventeen This book makes sense of it all from the ancient Greeks observation that some stars wander while others don t to Copernicus who made Earth a planet but rejected the Sun and the Moon to the discoveries of comets Uranus Ceres the asteroid belt Neptune Pluto centaurs the Kuiper Belt and Eris and extrasolar planets Weaving the history of our thinking about planets and cosmology into a single remarkable story Is Pluto a Planet is for all those who seek a fuller understanding of the science surrounding both Pluto and the provocative recent discoveries in our outer solar system

Longitude Dava Sobel, 1995-11-01 Describes the forty year effort of John Harrison to invent the chronometer the first

instrument able to keep accurate time for navigational purposes

The Unknown Universe Stuart Clark, 2016-07-05 A groundbreaking guide to the universe and how our latest deep space discoveries are forcing us to revisit what we know and what we don't On March 21 2013 the European Space Agency released a map of the afterglow of the Big Bang Taking in 440 sextillion kilometres of space and 13.8 billion years of time it is physically impossible to make a better map we will never see the early universe in more detail On the one hand such a view is the apotheosis of modern cosmology on the other it threatens to undermine almost everything we hold cosmologically sacrosanct The map contains anomalies that challenge our understanding of the universe It will force us to revisit what is known and what is unknown to construct a new model of our universe This is the first book to address what will be an epoch defining scientific paradigm shift Stuart Clark will ask if Newton's famous laws of gravity need to be rewritten if dark matter and dark energy are just celestial phantoms Can we ever know what happened before the Big Bang What's at the bottom of a black hole Are there universes beyond our own Does time exist Are the once immutable laws of physics changing

The Publishers Weekly, 2008 [Beyond Earth](#) Bob Krone, 2006 This is a critical time for the space program and for all of us Even the significant steps that we have taken since the dawn of the space age in 1957 including orbital flight the Moon landings and orbiting space stations will in retrospect seem to be tiny steps compared to what lies ahead Migrating into space will challenge us beyond anything we have previously accomplished and we are destined to face adventures that are both fantastically breathtaking and supremely dangerous Beyond Earth is for everyone interested in humankind's next great adventure the human settlement of the Solar System A unique collection of world class scholars scientists engineers managers astronauts artists authors and professors examine the key questions of our unique circumstance at the dawn of a new era in space exploration and development Why does space matter to us What can we use it for How can we get there efficiently What will ordinary life be like in space What will our homes be like on the Moon On Mars In orbit Will we play Will we love The book does not stop with questions It goes beyond the dramatic the superficial and the overly technical to the prescriptive literally laying the brick and mortar for our future space faring civilisation Contributing authors come from both hard and soft sciences include education and the arts and ask children who will be the future space dwellers for their visions They document needed research There are three underlying assumptions driving this book First that the human urge for flight exploration and survival plus its curiosity about the universe are deeply embedded in our genes and in our minds Second that even if these urges were ignored the continual improvement of the quality of life for the human race on earth and perhaps even its ultimate survival hinge on the successes of human exploration and habitation of space and Third that our generation can use the opportunity presented by outwards expansion to design a rewarding and exciting future of collaboration to capitalise on the lessons learned from human history on Earth
