Douglas Robertson,Institute of Transportation Engineers,1994 The primary focus of the manual is on how to conduct transportation engineering studies in the field Each chapter introduces the type of study and describes the methods of data collection the types of equipment used the personnel and level of training needed the amount of data required the procedures to follow and the techniques available to reduce and analyze the data Applications of the collected data or information are discussed only briefly The focus is on planning the study preparing for field data collection executing the data collection plan and reducing and analyzing of the data Guidelines for both oral and written presentation of study results are offered **Traffic and Highway Engineering, SI Edition** Nicholas J. Garber,Lester A. Hoel,2014-01-30 The new edition of Garber and Hoel s best selling TRAFFIC AND HIGHWAY ENGINEERING focuses on giving students insight into all facets of traffic and highway engineering Students generally come to this course with little knowledge or understanding of the importance of transportation much less of the extensive career opportunities within the field Transportation is an extremely broad field and courses must either cover all transportation modes or focus on specifics While many topics can be covered with a survey approach this often lacks sufficient depth and students leave the course without a full understanding of any of the fields This text focuses exclusively on traffic and highway engineering beginning with a discussion of the pivotal role transportation plays in our society including employment opportunities historical impact and the impact of transportation on our daily lives This approach gives students a sense of what the field is about as well as an opportunity to

consider some of its challenges Later chapters focus on specific issues facing transportation engineers The text uses pedagogical tools such as worked problems diagrams and tables reference material and realistic examples to demonstrate how the material is applied Important Notice Media content referenced within the product description or the product text may not be available in the ebook version [Accident Mitigation Guide for Congested Rural Two-lane Highways](#) Kay Fitzpatrick,2000 *Proceedings of AICCE'19* Fadzli Mohamed Nazri,2019-11-28 This book gathers the latest research innovations and applications in the field of civil engineering as presented by leading national and international academics researchers engineers and postgraduate students at the AWAM International Conference on Civil Engineering 2019 AICCE 19 held in Penang Malaysia on August 21 22 2019 The book covers highly diverse topics in the main fields of civil engineering including structural and earthquake engineering environmental engineering geotechnical engineering highway and transportation engineering water resources engineering and geomatic and construction management In line with the conference theme Transforming the Nation for a Sustainable Tomorrow which relates to the United Nations 17 Global Goals for Sustainable Development it highlights important elements in the planning and development stages to establish design standards beneficial to the environment and its surroundings The contributions introduce numerous exciting ideas that spur novel research directions and foster multidisciplinary collaborations between various specialists in the field of civil engineering *Traffic Engineering* ,1975 [Subject Guide to Books in Print](#) ,1975 [Speed Harmonization and Peak-period Shoulder Use to Manage Urban Freeway Congestion](#) ,2009 **Development of Safety-based Level-of-service Criteria for Isolated-signalized Intersections** Tae-Jun Ha,1994 **Safety Performance Functions for Intersections on Highways Maintained by the Virginia Department of Transportation** Nicholas J. Garber,2010 In recent years significant effort and money have been invested through research and implemented safety projects to enhance highway safety in Virginia However there is still substantial room for improvement in both crash frequency and severity As there are limits in the available funds for safety improvements it is crucial that allocated resources for safety improvement be spent at highway locations that will result in the maximum safety benefits In addition intersection crashes play a significant role in the safety conditions in Virginia For example crashes at intersections in Virginia for the period 2003 through 2007 account for 43 8% of all crashes and 26% of fatal crashes Therefore identifying intersections for safety improvements that will give the highest potential for crash reduction when appropriate safety countermeasures are implemented will have a significant impact on the overall safety performance of roads in Virginia The Federal Highway Administration FHWA has developed a procedure for identifying highway locations that have the highest potential for crash reduction ITT Corporation 2008 A critical component of this method is the use of safety performance functions SPFs to determine the potential for crash reductions at a location An SPF is a mathematical relationship model between frequency of crashes by severity and the most significant causal factors on a specific highway Although the SafetyAnalyst User s Manual presents several SPFs for

intersections these were developed using data from Minnesota FHWA also suggested that if feasible each state should develop its own SPFs based on crash and traffic volume data from the state as the SPFs that are based on Minnesota data may not adequately represent the crash characteristics in all states SPFs for intersections in Virginia were developed using the annual average daily traffic as the most significant causal factor emulating the SPFs currently suggested by SafetyAnalyst The SPFs were developed for both total crashes and combined fatal plus injury crashes through generalized linear modeling using a negative binomial distribution Models were also developed for urban and rural intersections separately and in order to account for the different topographies in Virginia SPFs were also developed for three regions Northern Western and Eastern This report covers Phases I and II of the study which includes urban and rural intersections maintained by VDOT Statistical comparisons of the models based on Minnesota data with those based on the Virginia data showed that the specific models developed for Virginia fit the Virginia crash data better The report recommends that VDOT s Traffic Engineering Division use the SPFs developed for Virginia and the specific regional SPFs suggested in this report to prioritize the locations in need of safety improvement
