

## Newton's First Law of Motion: Inertia

Newton's first law states that an object will remain at rest or in uniform motion in a straight line unless acted upon by an external force. This law is often summarized as "an object in motion stays in motion, and an object at rest stays at rest." This law is also known as the law of inertia. Inertia is the property of an object that resists any change in its state of motion. The more mass an object has, the more inertia it has, and the more force is required to change its motion.

Example: A ball at rest will stay at rest until a force is applied to it. A ball in motion will stay in motion until a force is applied to it.

Newton's first law is a special case of Newton's second law, which states that the net force on an object is equal to the mass of the object multiplied by its acceleration. When the net force is zero, the acceleration is zero, and the object's velocity is constant.

Newton's first law is a special case of Newton's second law, which states that the net force on an object is equal to the mass of the object multiplied by its acceleration. When the net force is zero, the acceleration is zero, and the object's velocity is constant.
