**Landscape Evolution** Kerry Gallagher, Stuart J. Jones, John Wainwright, 2008 The morphology of Earth's surface reflects the interaction of climate tectonics and denudational processes operating over a wide range of spatial and temporal scales These processes can be considered catastrophic or continuous depending on the timescale of observation or interest Recent research had required integration of historically distinct subjects such as geomorphology sedimentology climatology and tectonics Together these have provided new insights into absolute and relative rates of denudation and the factors that control the many dynamic processes involved Specific subject areas covered are sediment transport processes and the timescales of competing processes the role of the geological record and landscapes in constraining different processes the nature of landscape evolution at different spatial scales and in contrasting geological environments

**Risk Analysis VIII** C. A. Brebbia, 2012-09-01 Comprised of the papers presented at the eighth and latest International Conference Simulation in Risk Analysis and Hazard Mitigation this book covers a topic of increasing importance Scientific knowledge is essential to our better understanding of risk Natural hazards such as floods earthquakes landslides fires and others have always affected human societies Man made hazards however played a comparatively small role until the industrial revolution when the risk of catastrophic events started to increase due to the rapid growth of new technologies and the urbanisation of populations The interaction of natural and anthropogenic risks adds to the complexity of the problem Due to advances in computational methods and the ability to model systems more precisely we can now quantify hazards simulate their effects and calculate risk with greater accuracy enabling us to manage risk much more effectively These developments are particularly relevant to environmental issues where substantial risks are involved Governments and their publics now place a high priority on effective risk management and the mitigation of possible hazards Covering topics such as Estimation of Risk Risk Management Vulnerability Geomorphologic Risk Network Systems Climate Change Risks Hazard Prevention Management and Control Security and Public Safety Transportation Safety Safe Ship Operations Early Warning Systems Food Safety Risk Perception Natural Hazards Technological Risk the book will be of interest to planners emergency managers environmentalists engineers policy makers and other government officials researchers and academics involved in the field of risk and disaster management

*Phylogenomic Discordance in Plant Systematics* Stefan Wanke, Susann Wicke, 2023-11-15 Phylogenetics often uncovers contradicting hypotheses regarding the relationships within the same group of organisms a phenomenon known since the beginning of the molecular systematics era While historically single marker based analyses produced discordance nowadays entire cellular genomes or portions of the same genomic compartment conflict with others or the rest respectively In contrast to the beginning of the molecular systematics era when adding markers and taxa offered a way out of systematic errors genome inference based incongruences cannot be addressed and

explained easily Disagreeing phylogenomic hypotheses might originate from various evolutionary processes including but not limited to hybridization or incomplete lineage sorting thereby leading to gene tree versus species tree associated discrepancies Today this can be expanded to genome discordance where phylogenomic signals of organellar genomes plastid mitochondrial and the nuclear genome disagree due to intrinsically different coalescent paths or phenomena like organelle capture

Cooper, Hildegard Kehrer-Sawatzki, 2008-10-13 This splendid compendium will be the standard reference work for years to come a handbook to browse to consult to look things up in and to read with pleasure wonder and post Darwinian exhilaration Richard Dawkins This is a marvellous book It should be in every university library preferably in several copies and every reader of this journal should add it to their next grant application It really is that good I have already found this book to be invaluable For many years to come these two volumes will be the starting point for anyone wishing to find out about virtually any subject relating to human genetics Any scientist working on humans or other animals will find many things in these pages that will stimulate inform and inspire The authors editors and publishers are to be congratulated for their work order a copy now HUMAN GENETICS The publishers and editors deserve to be congratulated for publishing this major book which coincides with the 200th anniversary of the birth of Charles Darwin The book is well timed with biologists theologians and sociologists engaged in intense debate on the Darwinian Theory on the origin of species evolution and natural selection There is little doubt that this marvellous publication should be in the library

of universities and academic institutions dealing with basic and applied biology research and education It will not be surprising if the individual academic or researcher decides to invest in this resource and enrich their personal collection of leading books in genetics and genomics GENOMIC MEDICINE A Unique Collection of High Quality Articles Derived from the Acclaimed Encyclopedia of Life Sciences The revolution in human molecular genetics which has taken place over the last three decades has yielded a wealth of information not only on the structure and function of our genes but also on gene expression mutation and polymorphic variation Over the last five years the focus has moved from genes to genomes Even though the annotation of our 30 000 genes is still in progress genome wide studies have already yielded abundant evidence for the signatures of past selection and adaptive evolution within human gene sequences Further the completion of the sequencing of the 3 billion base pair human genome coupled with the increasing availability of other vertebrate genome sequences has ushered in a new era of comparative genomics We are now able to identify many of the molecular events from the chromosomal level down to the single base pair that have occurred during vertebrate mammalian primate and hominid evolution Indeed the detailed comparison of the human and chimpanzee genomes has begun to reveal some of the genetic changes that have been involved in the development of human lineage specific traits We are thus acquiring the ability to ask searching questions about our origins about the demographic processes associated with the global radiation of humankind as well as some of the unique adaptations that make us human Evolutionary biology has become so broad that its impact may be felt across the spectrum of the biological sciences The aim of the Handbook of Human Molecular Evolution is relatively straightforward to bring together under the same cover the many and varied strands of our knowledge of human primate vertebrate molecular evolution Hence the 282 chapters that comprise this essential reference work have been thematically arranged into twelve sections covering the whole scope of research into human molecular evolution General Concepts in Evolutionary Genetics Mutation Adaptation and Natural Selection Evolutionary and Population Genetics Human Evolution Human Genome Evolution Evolution of Human Gene Structure and Function Evolution of Gene Expression Mitochondrial Genome Evolution Chromosomal Evolution Comparative Genomics Evolution and Disease Susceptibility Analysis of Ancient DNA This conceptual outline informed the selection of the chapters themselves and the connections between them Some of these chapters are intended to be introductory aimed at undergraduates and non specialists They provide basic information and a list of recommended further reading to encourage the reader to explore a topic in more depth This approach helps the student reader progress from textbook material to primary literature Some chapters are overviews that address topics of broad interest and importance while others focus on quite specialized topics These chapters are written for postgraduate students and research workers they contain more detailed information and key references allowing the reader to investigate a specific area in more depth This format allows professionals to use the books as a quick reference source The chapters are richly supplied with website information to allow access to relevant data sources over the internet The self contained peer

reviewed articles in this unique handbook have been written by leading scientists in each field Key topics include the evolution of enzyme function the use of nucleic acid divergence as a molecular clock the origin of non functional or junk DNA the role of gene duplication in the emergence of novel gene function and the identification of molecular changes responsible for various human characteristics especially those pertaining to infection cognition disease and disease susceptibility The Handbook of Human Molecular Evolution has adopted an integrated approach to the study of human evolution and seeks throughout to emphasize the interplay between molecular genetic concepts and principles on the one hand and information acquisition and interpretation on the other In this way it is hoped that the documents of evolutionary history written into the fabric of our genome will become accessible to the widest possible audience

Tourism and Innovation C. Michael Hall,Allan M. Williams,2019-11-25 This ground breaking volume on the relationships between tourism and innovation provides an overview of relevant innovation theories and related literatures on entrepreneurship productivity regional development and competitiveness and their significance to contemporary tourism practices Innovation is a key concept in business and entrepreneurial studies and the broader social sciences Yet despite its policy and academic importance historically little attention has been given to the role of innovation in tourism and the corresponding contribution of tourism related human mobility to regional firm and product innovation This book emphasises that innovation in tourism is much more than a series of technological innovations as important as they are and instead needs to be understood in an economic social and political context with particular stress being placed on the extent to which innovations are shaped by the framework of governance and regulation as well as by institutional factors and activities of individual actors and entrepreneurs It is structured so as to introduce the reader to the overall significance of innovation at various levels and the role that innovation plays in firm and place competition Supported with case studies throughout this book is essential reading for all tourism students
