Biofuel Co-products as Livestock Feed Harinder P. S. Makkar, 2012 This publication covers a wide array of co products *Technologies of Water and Wastewater Treatment. Section I* Juan Manuel Peralta-Hernández, Stanislav Kolisnychenko, 2025-01-27 Aggregated Book *Oil Recovery from Palm Solid Waste* Dashiny Gopal, 2009 Many years of research have been done on extraction of residue oil from palm oil solid wastes Decanter cake is the solid waste produced from palm oil milling company after decanting the palm oil mill effluent while spent bleaching clay is the solid waste from palm oil refinery Basically this wastes still contains 30 40% of oil and this solid wastes are currently disposed directly in landfills without treatment causing severe water and air pollution problems Recovery of oil and the reuse of spent bleaching clay and decanter cake is the areas where great opportunity exists for cost saving in the oil processing industry This study described the extraction of residual oils of spent bleaching earth SBE from palm oil refinery and also described the extraction of residue oil from palm oil milling industry Here two methods are used for comparison to extract the oil from decanter cake and also spent bleaching clay There are soxhlet extraction method and also solvent decanting method The comparison of two methods shows that soxhlet extraction can give higher yield The optimum temperature and best duration of time to dry the decanter cake and spent bleaching clay also determined In this case the samples were dried at the temperatures 600C 1100C and the best temperature is 900C The optimum time was determined as 12 hours Four different solvents were used to extract the residue oil from the waste samples The results shows that the percentage of oil extracted from Methyl ethyl ketone and acetone was high compared to hexane and petroleum ether The iodine value was also determined to compare the quality of the oil extracted The range of iodine value obtained was 40 80 According to PORIM analysis mean value of crude oil is 51 3 Author *Base Oil Decolorization by Using Spent Bleaching Earth (SBE)* Kee Chuan Lim, 2009 Spent bleaching earth SBE is clay which in its virgin state has ability to adsorb coloring matter and remove organics The disposal of SBE brings environmental problem in Malaysia due to its high oil content Large volume of used lubricant oil is produced each year Waste oil regeneration process is carried out to reduce the amount of waste oil disposal which may leads to environmental damage In this study regenerated SBE was used as an adsorbent for lubricant base oil decolorization This study was conducted by varying the temperature SBE dosage and agitation time to investigate the effectiveness of SBE in adsorption process and determine the physical properties of treated oil as well The oil properties studied were color flash point pour point water content and viscosity Copper corrosion test was done for treated oil oxidation stability testing Prior to experiment work the Design of Expert Software was employed to aid

the analysis of experimental data collected The software is capable to design the research experiment with minimal statistical error From the analysis and results it showed that 140 C operating temperature 5g SBE usage and 120 min agitation time provided the most suitable condition to obtain desirable oil The adsorption process follow Langmuir isotherm As conclusion even though SBE is not effective in decolorization process it has potential in removing water and contaminants in used oil
