Dhaka University Journal of Business Studies, 2021 *Internationalisation in the Cloud. An explorative case study into the foreign market expansion of SaaS providers* Christina Küppers, 2017-07-17

Master s Thesis from the year 2016 in the subject Business economics Business Management Corporate Governance grade 1
0 Copenhagen Business School Department of Intercultural Communication and Management language English abstract This
thesis investigates the internationalisation complexities of cloud technology vendors To enhance the understanding of foreign
market expansion of cloud providers this study sought to answer the overarching research questions how do cloud providers
internationalise and is available literature to date still relevant for cloud technology vendors The researchers utilised a single
case study of NN an expanding Danish cloud SME to provide indepth insights for the business literature realm which has so
far attracted scarce research Literature has focused almost exclusively on SMEs MNCs and born globals but cloud providers
were mostly ignored To date little systematic investigations have considered that the dynamics and processes of
internationalisation significantly change in a cloud context The most important contribution is a research model
encompassing twelve moderator variables impacting the performance of cloud firms Their suggested influence was drawn
from a thorough theoretical analysis of contemporary internationalisation literature from the 1950s to the present day
Thereby both versions of the Uppsala Model of Internationalisation by Johanson and Vahlne 1977 2009 were selected as
suitable to provide structure for the research model namely the process model and the network model Complementing the
four categories of the Uppsala Model the research model was enhanced with two additional categories so as to examine cloud
vendor internationalisation Using a sample of five employees who are directly responsible for internationalisation activities of
the case company NN this thesis offers interesting insights into the complexities of cloud internationalisation The findings
illustrate that internationalisation literature to date is still useful for examining internationalisation performance and in
particular the network model However since cloud vendors mainly operate virtually this brings forth many advantages and
disadvantages which have previously not been considered Theoretical contributions and implications for future research are
discussed This thesis provides support for ten out of twelve items and offers various compelling areas for future research

Cloud Data Centers and Cost Modeling Caesar Wu,Rajkumar Buyya,2015-03-02 Cloud Data Centers and Cost Modeling
establishes a framework for strategic decision makers to facilitate the development of cloud data centers Just as building a
house requires a clear understanding of the blueprints architecture and costs of the project building a cloud based data
center requires similar knowledge The authors take a theoretical and practical approach starting with the key questions to
help uncover needs and clarify project scope They then demonstrate probability tools to test and support decisions and
provide processes that resolve key issues After laying a foundation of cloud concepts and definitions the book addresses data
center creation infrastructure development cost modeling and simulations in decision making each part building on the
previous In this way the authors bridge technology management and infrastructure as a service in one complete guide to
data centers that facilitates educated decision making Explains how to balance cloud computing functionality with data
center efficiency Covers key requirements for power management cooling server planning virtualization and storage

management Describes advanced methods for modeling cloud computing cost including Real Option Theory and Monte Carlo Simulations Blends theoretical and practical discussions with insights for developers consultants and analysts considering data center development Panjab University Law Review ,2017 *Cloud Computing.
