Key Factors Affecting Labor Productivity in the Construction

Industry Casey Jo Kuykendall,2007 ABSTRACT Labor productivity is one of the least studied areas within the construction industry Productivity improvements achieve high cost savings with minimal investment Due to the fact that profit margins are small on construction projects cost savings associated with productivity are crucial to becoming a successful contractor The chief setback to improving labor productivity is measuring labor productivity The main objective of this study is to assign a weight of importance to each of the top twelve factors affecting productivity Experts at the University of Florida Rinker School of Construction compiled a list of the top twelve factors affecting productivity A survey consisting of the twelve factors and a brief explanation of each was mailed to contractors listed on the ENR Top 400 2006 in which they were asked to apply a weight to each of the twelve factors totaling 100% Results of this survey were then analyzed using the Delphi Method These weights will be used in a future study to create a tool to help contractor s grade productivity on their projects in the preplanning stage and plan improvements in the most beneficial areas This productivity tool will be created by breaking each factor down into a list of activities The project manager will assign a value to each activity representing how well their current project is achieving this activity The total for each factor is then multiplied by its respective weight generated in this study The outcome of the tool will give a breakdown of areas for improvement along with values that allow for project managers to focus on the most beneficial areas
