encouraging innovation and marketing. Consequently, governmental organizations, public and private companies, allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face. Unfortunately, this practice may complicate organizational workflows and increase costs for government entities, businesses, and consumers. The success of the evidence-based approach in improving performance in a wide range of professions, for example, medicine, policing, and education, leads us to believe that an evidence-based cybersecurity approach is critical for improving cybersecurity efforts. This book seeks to explain the foundation of the evidence-based cybersecurity approach, review its relevance in the context of existing security tools and policies, and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers' decision-making process. The evidence-based cybersecurity approach explained aims to support security professionals, policymakers, and individual computer users' decision-making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets. This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision-makers' political, financial, social, and personal experience backgrounds when adopting cybersecurity tools and policies. This approach is also a model in which policy decisions are made based on scientific research findings.

*Cybersecurity in the Age of Smart Societies* Hamid Jahankhani, 2023-01-02. This book provides an opportunity for researchers, scientists, government officials, strategists, and operators and maintainers of large, complex, and advanced systems and infrastructure to update their knowledge with the state of best practice in the challenging domains whilst networking with the leading representatives, researchers, and solution providers. The ongoing pandemic has created a new level of threats which presents new challenges around privacy, data protection, malicious application, unprotected networks, or networks with basic protection that are being used as a gateway to larger infrastructure with complicated architecture and unintentional misuse such as those associated with algorithmic bias. All these have increased the number of attack vectors that can be used to attack such networks. Drawing on 13 years of successful events on information security, digital forensics, and cyber crime, the 14th ICGS3 22 conference aims to provide attendees with an information-packed agenda with representatives from across the industry and the globe. The challenges of complexity, rapid pace of change, and risk/opportunity issues associated with modern products, systems, special events, and infrastructures. In an era of unprecedented volatile political and economic environment across the world, computer-based systems face ever more increasing challenges, disputes, and responsibilities, and whilst the Internet has created a global platform for the exchange of ideas, goods, and services, it has also created boundless opportunities for cyber crime. This volume presents new materials and contributes to knowledge through the technological advances that are being made across artificial intelligence, AI, machine learning, blockchain, and quantum.
