Metal Foams: A Design Guide Michael F. Ashby, Tony Evans, NA Fleck, J.W. Hutchinson, H.N.G. Wadley, L. J. Gibson, 2000-07-30 Metal foams are at the forefront of technological development for the automotive aerospace and other weight dependent industries They are formed by various methods but the key facet of their manufacture is the inclusion of air or other gaseous pockets in the metal structure The fact that gas pockets are present in their structure provides an obvious weight advantage over traditionally cast or machined solid metal components The unique structure of metal foams also opens up more opportunities to improve on more complex methods of producing parts with space inclusions such as sand casting This guide provides information on the advantages metal foams possess and the applications for which they may prove suitable Offers a concise description of metal foams their manufacture and their advantages in industry Provides engineers with answers to pertinent questions surrounding metal foams Satisfies a major need in the market for information on the properties performance and applications of these materials *Metal Foams* M. F. Ashby, 2000 This work offers a description of how metal foams are made listing applications which have been suggested It also covers how metal foams can be cut finished and joined and includes case studies illustrating successful and potential applications IEEE ...
