Tutorials in Introductory Physics Lillian C. McDermott, Peter S. Shaffer, University of Washington. Physics Education Group, 1998 This landmark book presents a series of physics tutorials designed by a leading physics education researcher Emphasizing the development of concepts and scientific reasoning skill the tutorials focus on the specific conceptual and reasoning difficulties that students tend to find the most difficult This is a Preliminary Version offering tutorials for a range of topics is Mechanics E M Waves Optics The complete tutorials will be published in 1999 *Successful Science and Engineering Teaching* Calvin S. Kalman, 2017-10-11 The intent of this book is to describe how a professor can provide a learning environment that assists students in coming to grips with the nature of science and engineering to understand science and engineering concepts and to solve problems in science and engineering courses The book is based upon articles published in *Science Educational Research* and which are grounded in educational research both quantitative and qualitative performed by the author over many years

**Pedagogy in Higher Education** Gordon Wells, Anne Edwards, 2013-11-18 What can Cultural Historical Activity Theory CHAT contribute to the solution of the problems facing higher education today This edited volume brings together the work of an international group of scholars and researchers to address this important question Drawing on contemporary interpretations of CHAT the contributors take on a wide range of issues ranging from pedagogy to administration and from teacher preparation to university outreach An introduction presents the key principles of CHAT Subsequent chapters address such issues as effective ways of teaching large undergraduate classes providing support for struggling writers or for students with disabilities opening up opportunities for students from historically underserved communities preparing students for the professions and building bridges between higher education and the wider community Readers with an interest in higher education will encounter ideas in these chapters that will prompt them to rethink their role in preparing today's students for tomorrow's challenges

Education for Innovation, 2008-01-01 In *Education for Innovation Implications for India China and America* distinguished thought leaders explore cutting edge questions such as Can inventiveness and ingenuity be taught and nurtured in schools and colleges What are the most effective educational strategies to promote these abilities How are vibrant economies driven by innovation What is the relationship between education for innovation and national competitiveness or economic development Focusing on the World's three most populous countries and largest economies this book provides a forum for international experts to address a range of critically important issues related to higher education and its role in creating innovative societies A wide diversity of educators policymakers and corporate representatives who are dependent on innovation as the well spring of their success will benefit from the perspectives provided by this volume The contributors' critical analyses will be of value to higher education faculty and administrators government officials interested in innovation education policy and national economic and workforce development CEOs and other officials from the online education community and high tech corporate

industries Recent focus in all three countries on higher education as a resource for national economic advancement makes the book especially timely

**Exploring Signature Pedagogies** Regan A. R. Gurung, Nancy L. Chick, Aeron Haynie, 2023-07-03 From the Foreword These authors have clearly shown the value in looking for the signature pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women s Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords

*Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles* Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community

These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

**Research on Physics Education** Edward F. Redish, Matilde Vicentini, Società italiana di fisica, 2004 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment
