CUDA Accelerated Cone-beam Reconstruction Albert W. Sze, 2011 Cone Beam Computed Tomography CBCT is an imaging method that reconstructs a 3D representation of the object from its 2D X ray images It is an important diagnostic tool in the medical field especially dentistry However most 3D reconstruction algorithms are computationally intensive and time consuming this limitation constrains the use of CBCT In recent years high end graphics cards such as the ones powered by NVIDIA graphics processing units GPUs are able to perform general purpose computation Due to the highly parallel nature of the 3D reconstruction algorithms it is possible to implement these algorithms on the GPU to reduce the processing time to the level that is practical Two of the most popular 3D Cone Beam reconstruction algorithms are the Feldkamp Davis Kress algorithm FDK and the Algebraic Reconstruction Technique ART FDK is fast to construct 3D images but the quality of its images is lower than the quality of ART images However ART requires significantly more computation Material ART is a recently developed algorithm that uses beam hardening correction to eliminate artifacts In this thesis these three algorithms were implemented on the NVIDIA s CUDA platform These CUDA based algorithms were tested on three different graphics cards using phantom and real data The test results show significant speedup when compared to the CPU software implementation The speedup is sufficient to allow a moderate cost personal computer with NVIDIA graphics card to process CBCT images in real time

Accelerating Live Graph Cut Based Object Tracking Using CUDA *Hands-On GPU-Accelerated Computer Vision with OpenCV and CUDA* Bhaumik Vaidya, 2018-09-26

Discover how CUDA allows OpenCV to handle complex and rapidly growing image data processing in computer and machine vision by accessing the power of GPU. Key Features: Explore examples to leverage the GPU processing power with OpenCV and CUDA. Enhance the performance of algorithms on embedded hardware platforms. Discover C and Python libraries for GPU acceleration.

Book Description: Computer vision has been revolutionizing a wide range of industries, and OpenCV is the most widely chosen tool for computer vision with its ability to work in multiple programming languages. Nowadays in computer vision, there is a need to process large images in real time, which is difficult to handle for OpenCV on its own. This is where CUDA comes into the picture, allowing OpenCV to leverage powerful NVIDIA GPUs. This book provides a detailed overview of integrating OpenCV with CUDA for practical applications. To start with, you'll understand GPU programming with CUDA, an essential aspect for computer vision developers who have never worked with GPUs. You'll then move on to exploring OpenCV acceleration with GPUs and CUDA by walking through some practical examples. Once you have got to grips with the core concepts, you'll familiarize yourself with deploying OpenCV applications on NVIDIA Jetson TX1, which is popular for computer vision and deep learning applications. The last chapters of the book explain PyCUDA, a Python library that leverages the power of CUDA and GPUs for accelerations and can be used by computer vision developers who use OpenCV with Python. By the end of this book, you'll have enhanced computer vision applications with the help of this book's hands-on approach.

What you will learn: Understand how to access GPU device properties and capabilities from CUDA programs. Learn how to accelerate searching and sorting algorithms. Detect shapes such as lines and circles in images. Explore object tracking and detection with algorithms. Process videos using different video analysis techniques in Jetson TX1. Access GPU device properties from the PyCUDA program. Understand how kernel execution works.

Who this book is for: This book is a go-to guide for you if you are a developer working with OpenCV and want to learn how to process more complex image data by exploiting GPU processing. A thorough understanding of computer vision concepts and programming languages such as C or Python is expected.

Use the GPU Successfully in Your Radiotherapy Practice. With its high processing power, cost effectiveness, and easy deployment, access, and maintenance, the graphics processing unit (GPU) has increasingly been used to tackle problems in the medical physics field.

ranging from computed tomography reconstruction to Monte Carlo radiation transport simulation Graphics Processing Unit Based High Performance Computing in Radiation Therapy collects state of the art research on GPU computing and its applications to medical physics problems in radiation therapy Tackle Problems in Medical Imaging and Radiotherapy The book first offers an introduction to the GPU technology and its current applications in radiotherapy Most of the remaining chapters discuss a specific application of a GPU in a key radiotherapy problem These chapters summarize advances and present technical details and insightful discussions on the use of GPU in addressing the problems The book also examines two real systems developed with GPU as a core component to accomplish important clinical tasks in modern radiotherapy Translate Research Developments to Clinical Practice Written by a team of international experts in radiation oncology biomedical imaging computing and physics this book gets clinical and research physicists graduate students and other scientists up to date on the latest in GPU computing for radiotherapy It encourages you to bring this novel technology to routine clinical radiotherapy practice *GPU-Accelerated Research in Quant Finance* Thomas V. Trex, 2025-12-01 GPU Accelerated Research in Quant Finance Using CUDA to Speed Up Backtests and Analytics This book is for quantitative researchers systematic portfolio managers and technologists who want to turn GPUs from a buzzword into a practical edge It bridges the gap between theoretical quant finance and high performance computing showing how to move real research workloads backtests risk engines and pricing libraries from CPU bound prototypes to production ready GPU pipelines Readers will learn the mathematical and statistical foundations most relevant to GPU acceleration then build a rigorous research and backtesting methodology that survives contact with real markets and regulators The core chapters develop a working mental model of modern GPU architectures and the CUDA programming model before introducing powerful patterns and libraries for Monte Carlo PDE FFT pricing portfolio optimization and risk analytics Throughout the focus is on trustworthy speedups performance engineering profiling validation and reproducibility The book assumes comfort with Python and basic quantitative finance but no prior CUDA experience All examples are designed for implementation in a modern research stack with LaTeX quality formulas and code that map cleanly onto Python CUDA tooling The result is a practical end to end guide to designing faster research loops and more ambitious models without sacrificing transparency or control *Accelerating MATLAB with GPU Computing* Jung W. Suh, Youngmin Kim, 2013-11-18 Beyond simulation and algorithm development many developers increasingly use MATLAB even for product deployment in computationally heavy fields This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units GPUs While MATLAB successfully provides high level functions as a simulation tool for rapid prototyping the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it Accelerating MATLAB with GPUs offers a primer on bridging this gap Starting with the basics setting up MATLAB for CUDA in Windows Linux and Mac OS X and profiling it then guides users through advanced topics such as CUDA libraries The authors share

their experience developing algorithms using MATLAB C and GPUs for huge datasets modifying MATLAB codes to better utilize the computational power of GPUs and integrating them into commercial software products Throughout the book they demonstrate many example codes that can be used as templates of C MEX and CUDA codes for readers projects Download example codes from the publisher s website <http://booksite.elsevier.com/9780124080805> Shows how to accelerate MATLAB codes through the GPU for parallel processing with minimal hardware knowledge Explains the related background on hardware architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real world projects

Accelerating Live Graph-Cut-Based Object Tracking Using CUDA. Ismael Daribo,Hideo Saito,Yuki Takaya,Zachary A. Garrett,2011 [Accelerating and Predicting Map Projections with CUDA and MLP](#) Jiaqi Zhang (Data science engineer),2018 We provide a precise mathematical definition of map distortion and introduce three strategies for finding the best oblique map projections having the same distortion properties as their normal aspect counterparts on earth regions that have minimal distortion for certain specific regions of the earth namely regions whose boundary consists of one or two parallels of latitude We use heap map to visualize the distortion of several unusually shaped countries under particular oblique projection applying our strategies and then optimize the time efficiency of original sequential executed programs with CUDA a GPU parallel computation method impressively

Geometry of Cone-beam Reconstruction Xiaochun Yang,2002 Geometry is the synthetic tool we use to unify all existing analytical cone beam reconstruction methods These reconstructions are based on formulae derived by Tuy Tuy 1983 Smith Smith 1985 and Grangeat Grangeat 1991 which explicitly link the cone beam data to some intermediate functions in the Radon transform domain However the essential step towards final reconstruction that is differential backprojection has not yet achieved desired efficiency A new inversion formula is obtained directly from the 3D Radon inverse Radon 1917 Helgason 1999 It incorporates the cone beam scanning geometry and allows the theoretical work mentioned above to be reduced to exact and frugal implementations Extensions can be easily carried out to 2D fan beam reconstruction as well as other scanning modalities such as parallel scans by allowing more abstract geometric description on the embedding subspace of the Radon manifold The new approach provides a canonical inverse procedure for computerized tomography in general with applications ranging from diagnostic medical imaging to industrial testing such as X ray CT Emission CT Ultrasound CT etc It also suggests a principled frame for approaching other 3D reconstruction problems related to the Radon transform The idea is simple as was spelled out by Helgason on the opening page of his book The Radon Transform Helgason 1999 a remarkable duality characterizes the Radon transform and its inverse Our study shows that the dual space the so called Radon space can be geometrically decomposed according to the specified scanning modality
