Advanced Mathematical Analysis R. Beals, 2013-12-01 Once upon a time students of mathematics and students of science or engineering took the same courses in mathematical analysis beyond calculus Now it is common to separate advanced mathematics for science and engineering from what might be called advanced mathematical analysis for mathematicians It seems to me both useful and timely to attempt a reconciliation The separation between kinds of courses has unhealthy effects Mathematics students reverse the historical development of analysis learning the unifying abstractions first and the examples later if ever Science students learn the examples as taught generations ago missing modern insights A choice between encountering Fourier series as a minor instance of the representation theory of Banach algebras and encountering Fourier series in isolation and developed in an ad hoc manner is no choice at all It is easy to recognize these problems but less easy to counter the legitimate pressures which have led to a separation Modern mathematics has broadened our perspectives by abstraction and bold generalization while developing techniques which can treat classical theories in a definitive way On the other hand the applicator of mathematics has continued to need a variety of definite tools and has not had the time to acquire the broadest and most definitive grasp to learn necessary and sufficient conditions when simple sufficient conditions will serve or to learn the general framework encompassing different examples
