*Proceedings of the XVII International Symposium SymOrg 2020* Dušan Starčević, Sanja Marinković, 2020-06-30. Ever since 1989, the Faculty of Organizational Sciences, University of Belgrade, has been the host of SymOrg, an event that promotes scientific disciplines of organizing and managing a business. Traditionally, the Symposium has been an opportunity for its participants to share and exchange both academic and practical knowledge and experience in a pleasant and creative atmosphere. This time, however, due to the challenging situation regarding the COVID-19 pandemic, we have decided that all the essential activities planned for the International Symposium SymOrg 2020 should be carried out online between the 7th and the 9th of September 2020. We are very pleased that the topic of SymOrg 2020, Business and Artificial Intelligence, attracted researchers from different institutions both in Serbia and abroad. Why is artificial intelligence a disruptive technology? Simply because it significantly alters the way consumers, industries, or businesses operate. According to the European Commission document titled Artificial Intelligence for Europe 2018, AI is a key disruptive technology that has just begun to reshape the world. The Government of the Republic of Serbia has also recognized the importance of AI for the further development of its economy and society and has prepared an AI Development Strategy for the period between 2020 and 2025. The first step has already been made: the Science Fund of the Republic of Serbia, after a public call, has selected and financed twelve AI projects. This year, more than 200 scholars and practitioners authored and co-authored the 94 scientific and research papers that had been accepted for publication in the Proceedings. All the contributions to the Proceedings are classified into the following 11 sections: Information Systems and Technologies in the Era of Digital Transformation; Smart Business Models and Processes; Entrepreneurship; Innovation and Sustainable Development; Smart Environment for Marketing and Communications; Digital

Usually when we talk about Software Architecture what comes to mind is a good working system We concentrate more on the function of the software than the structure The structure of the system is treated as an inconsequential part of the software development process In relation to this business managers and stakeholders believe that clean software is working software The truth is that a system works well does not mean it is a clean one In this book Software Architecture is explored from its two most significant qualities structure and behavior The structure of the software plays an important role in software development it determines the behavior of the software The structure covers modules functions classes services and boundaries and encompasses the system itself But most times developers often make the mistake of concentrating more on the behavior of the system while the structure comes last This action has contributed to most of the problems we have in software development today This book explains why the structure of the software should come before the behavior It provides a step by step guide to creating flexible software that will be susceptible to change when the need be It looks at the various principles guiding software design These principles range from dependencies component coupling component cohesion to the classes of elements contained in a software and how these elements can be separated from each other The principles serve as a guideline to creating clean software Explanation of the difference between a working Architecture and a Clean Architecture is given Clean Software runs smoothly and has a longer lifespan than working software The book guides programmers on the foundation and the building blocks to creating Clean Software Also developers are guided on how to make their system obey the rules of testability Clean Software is testable software

*Clean Architecture* William Vance,2020-03-20 Software architecture refers to the design and implementation of high level software structures It is the result of implementing a number of architectural elements that meet the highest functional and operational requirements of the system as well as non functional requirements such as scalability reliability availability and portability This offers you advanced strategies in the world of application programming based on clean architecture especially relevant when complex projects must be developed Throughout the book the advanced concepts related to clean software architectures are explained The strategy applied is to understand the characteristics of the most relevant structures in the market today What you ll learn Develop a clear strategic and tactical mentality How to have confidence and security in the role of the Software Architect Access the update on concepts generalities and trends that have emerged in modern software engineering The continuous improvements in the processes associated with the development of software The production of quality software products seeking to increase efficiency for both personal and professional use This is an advanced level book on Clean Software Architecture Each topic has been carefully evaluated and selected to add value to your professional career It is an essential book in a series in clean architecture for developers committed to their profession and concerned about the quality of their work and are interested in the incorporation of clean architectures into their projects
