scientists It mainly developed as a field in its own right during the twentieth century and is now a diversified and lively  
research area This book surveys the current state of the discipline by focusing on central themes like confirmation of

scientific hypotheses scientific explanation causality the relationship between science and metaphysics scientific change the relationship between philosophy of science and science studies the role of theories and models unity of science These themes define general philosophy of science The book also presents sub disciplines in the philosophy of science dealing with the main sciences logic mathematics physics biology medicine cognitive science linguistics social sciences and economics While it is common to address the specific philosophical problems raised by physics and biology in such a book the place assigned to the philosophy of special sciences is much more unusual Most authors collaborate on a regular basis in their research or teaching and share a common vision of philosophy of science and its place within philosophy and academia in general The chapters have been written in close accordance with the three editors thus achieving strong unity of style and tone
