Structural Analysis 2 Nptel:

Advanced Structural Analysis with MATLAB® Srinivasan Chandrasekaran, 2018-12-07 Building structures are unique in the field of engineering as they pose challenges in the development and conceptualization of their design. As more innovative structural forms are envisioned, detailed analyses using computer tools are inevitable. This book enables readers to gain an overall understanding of computer-aided analysis of various types of structural forms using advanced tools such as MATLAB. Detailed descriptions of the fundamentals are explained in a classroom style which will make the content more user-friendly and easier to understand. Basic concepts are emphasized through simple illustrative examples and exercises, and analysis methodologies and guidelines are explained through numerous example problems.

Advanced Steel Design of Structures Srinivasan Chandrasekaran, 2019-11-01 Advanced Steel Design of Structures examines the design principles of steel members under special loads and covers special geometric forms and conditions not typically presented in standard design books. It explains advanced concepts in a simple manner using numerous illustrative examples and MATLAB codes. Features: Provides analysis of members under unsymmetrical bending. Includes coverage of structures with special geometry and their use in offshore applications for ultra-deep water oil and gas exploration. Presents numerical modeling and analysis of steel members under fire conditions, impact, and blast loads. Includes MATLAB examples that will aid in the capacity building of civil engineering students approaching this complex subject. Written for a broad audience, the presentation of design concepts of steel members will be suitable for upper-level undergraduate students. The advanced design theories for offshore structures under special loads will be an attractive feature for post-graduate students and researchers. Practicing engineers will also find the book useful as it includes numerous solved examples and practical tutorials.

Structures for Architects Jayashree Aniruddha Madav, Srinivasan Chandrasekaran, Sanjeev Singh, 2025-08-29 Structures for Architects: Planning, Analysis, and Design explains the basics of structural systems to help architects conceive the structural form and analyze and design in a comprehensive manner. The objective is not to explain the structural analysis and design of complex systems in detail but to explain the analysis and design of structural members in a simple and elementary approach. Presenting basic concepts in a simple manner, the book deals with the presentation of structural systems used in the construction of public buildings. Architectural design, urban planning, guidelines, basic rules of fire safety, and earthquake-resistant design are discussed in a conceptual manner. Examples included throughout the book shall help students, faculty, and practicing architects understand structural analysis and design in a straightforward manner, and exercise problems are presented to aid in the understanding of the contents presented. This book serves as a useful reference material for both academicians and practicing professionals. Strengthens the capacity of architects in fundamental structural analysis and design. Presents numerical examples and exercises for self-study in each chapter, including MATLAB examples. Includes the basics for understanding architectural design, urban planning, fire safety, and earthquake-resistant design. Examines

construction planning and management through CPM and PERT methods to aid in understanding the fundamentals of project management Structural Composite Materials Satish Babu Boppana, C. G. Ramachandra, K. Palani Kumar, S.

Ramesh, 2023-10-30 This book covers topics related to structural composite materials such as processing characterization applications and challenges The book presents ways of processing composites where different types of composites can be processed depending on the type of reinforcement and matrix It also outlines the evaluation of mechanical properties of a few processed composites and discusses the potential applications of composites and machining challenges faced in processing polymer and ceramic composites The book caters to material scientists industrial practitioners researchers and students working on structural composite materials *Design Aids of Offshore Structures Under Special Environmental Loads including Fire Resistance* Srinivasan Chandrasekaran, Gaurav Srivastava, 2018-01-12 This book provides detailed analysis methods and design guidelines for fire resistance a vital consideration for offshore processing and production platforms Recent advancements in the selection of various geometric structural forms for deep water oil exploration and production require a detailed understanding of the design of offshore structures under special loads Focusing on a relatively new aspect of offshore engineering the book offers essential teaching material illustrating and explaining the concepts discussed through many tutorials It creates a basis for designing new courses for students of ocean engineering and naval architecture civil engineering and applied mechanics at both undergraduate and graduate levels As such its content can be used for self study or as a text in structured courses and professional development programs **Textiles for Industrial Applications** R. Senthil Kumar, 2016-04-19 An evolution is currently underway in the textile industry and Textile for Industrial Applications is the guidebook for its growth This industry can be classified into three categories clothing home textile and industrial textile Industrial textiles also known as technical textiles are a part of the industry that is thriving and showing great promise Unlike conventional textiles traditionally used for clothing or furnishing by consumers industrial textiles are used for manufacturing and functionality purposes and generally by other industries This book provides an encyclopedic review of industrial textiles covering all of the latest trends in the development and application of these textiles with advice and suggestions on how to apply them in other industries Discusses the latest technologies adopted in the industrial textile industry including nano finishing and plasma applications Covers the basic fundamentals about product characteristics and production techniques Caters to students and faculty involved in textile technology composite technology and other interdisciplinary courses as it relates to product engineering and product development Textiles for Industrial Applications details the market potential and growth of industrial textiles and explains the steps involved in the product development of industrial textiles It discusses property requirement the basic textile manufacturing process manufacturing techniques and fibers used as well as application methods The book highlights recent developments in terms of raw material usage manufacturing technology and value added finishes in this sector A separate chapter focuses on the testing procedures

of various industrial textiles

Structural Analysis-II, 5th Edition Bhavikatti S.S., Structural analysis or the theory of structures is an important subject for civil engineering students who are required to analyse and design structures It is a vast field and is largely taught at the undergraduate level A few topics such as matrix method and plastic analysis are also taught at the postgraduate level and in structural engineering electives The entire course has been covered in two volumes Structural Analysis I and Structural Analysis II Structural Analysis II not only deals with the in depth analysis of indeterminate structures but also special topics such as curved beams and unsymmetrical bending The book provides an introduction to advanced methods of analysis namely matrix method and plastic analysis *Structural Analysis 2* Salah Khalfallah,2018-10-08 This book enables the student to master the methods of analysis of isostatic and hyperstatic structures To show the performance of the methods of analysis of the hyperstatic structures some beams gantries and reticular structures are selected and subjected to a comparative study by the different methods of analysis of the hyperstatic structures This procedure provides an insight into the methods of analysis of the structures
