Exact and Approximate Solutions for Mathematical Models in Science and Engineering Christian Constanda, Paul J. Harris, Bardo E. J. Bodmann, 2024-07-13 This contributed volume collects papers presented during a special session on integral methods in science and engineering at the 2023 International Conference on Computational and Mathematical Methods in Science and Engineering CMMSE held in Cadiz Spain from July 3-8 2023 Covering the applications of integral methods to scientific developments in a variety of fields the chapters in this volume are written by well known researchers in their respective disciplines and present new results in both pure and applied mathematics Each chapter shares a common methodology based on a combination of analytic and computational tools an approach that makes this collection a valuable multidisciplinary reference on how mathematics can be applied to various real world processes and phenomena A History in Sum Steve Nadis, Shing-Tung Yau, 2013-11-01 In the twentieth century mathematicians at Harvard University trailblazed a distinctly American tradition in algebraic geometry and topology complex analysis number theory and other esoteric fields Written in accessible prose A History in Sum takes a close look at the contributions to higher mathematics of these extraordinary minds **Lipman Bers, a Life in Mathematics** Linda Keen, Irwin Kra, Rubí E. Rodríguez, 2015-09-15 The book is part biography and part collection of mathematical essays that gives the reader a perspective on the evolution of an interesting mathematical life It is all about Lipman Bers a giant in the mathematical world who lived in turbulent and exciting times It captures the essence of his mathematics a development and transition from applied mathematics to complex analysis quasiconformal mappings and moduli of Riemann surfaces and the essence of his personality a progression from a young revolutionary refugee to an elder statesman in the world of mathematics and a fighter for global human rights and the end of political torture The book contains autobiographical material and short reprints of his work The main content is in the exposition of his research contributions sometimes with novel points of view by students grand students and colleagues The research described was fundamental to the growth of a central part of 20th century mathematics that now in the 21st century is in a healthy state with much current interest and activity The addition of personal recollections professional tributes and photographs yields a picture of a man his personal and professional family and his time Approximation by Solutions of Partial Differential Equations B. Fuglede, M. Goldstein, W. Haussmann, W.K. Hayman, L. Rogge, 2012-12-06 This volume consists of the proceedings of the NATO Advanced Research Workshop on Approximation by Solutions of Partial Differential Equations Quadrature Formulae and Related Topics which was held at Hanstholm Denmark These proceedings include the main invited talks and contributed papers given during the workshop The aim of these lectures was to present a selection of results of the latest research in the field In addition to covering topics in approximation by solutions of partial differential equations and quadrature formulae this volume is also concerned with related areas such as Gaussian quadratures the Pompeiu problem rational approximation to the Fresnel integral boundary correspondence of univalent

harmonic mappings the application of the Hilbert transform in two dimensional aerodynamics finely open sets in the limit set of a finitely generated Kleinian group scattering theory harmonic and maximal measures for rational functions and the solution of the classical Dirichlet problem In addition this volume includes some problems in potential theory which were presented in the Problem Session at Hanstholm Complex Analysis And Potential Theory - Proceedings Of The Conference Satellite To Icm 2006 T Aliyev Azeroglu, Promarz M Tamrazov, 2007-08-13 This volume gathers the contributions from outstanding mathematicians such as Samuel Krushkal Reiner K hnau Chung Chun Yang Vladimir Miklyukov and others It will help researchers to solve problems on complex analysis and potential theory and discuss various applications in engineering The contributions also update the reader on recent developments in the field Moreover a special part of the volume is completely devoted to the formulation of some important open problems and interesting conjectures Complex Analysis and Potential Theory Tahir Aliyev Azeroglu, Promarz Melikovich Tamrazov, 2007 This volume gathers the contributions from outstanding mathematicians such as Samuel Krushkal Reiner K hnau Chung Chun Yang Vladimir Miklyukov and others It will help researchers to solve problems on complex analysis and potential theory and discuss various applications in engineering The contributions also update the reader on recent developments in the field Moreover a special part of the volume is completely devoted to the formulation of some important open problems and interesting conjectures **The Schwarzian Derivative in Riemannian Geometry, Univalence Criteria and Quasiconformal Reflections** Martin S. Chuaqui, 1990

The Complex Analytic Theory of Teichmüller Spaces Subhashis Nag, 1988-03-03 An accessible self contained treatment of the complex structure of the Teichmüller moduli spaces of Riemann surfaces Complex analysts geometers and especially string theorists will find this work indispensable The Teichmüller space parametrizing all the various complex structures on a given surface itself carries in a completely natural way the complex structure of a finite or infinite dimensional complex manifold Nag emphasizes the Bers embedding of Teichmüller spaces and deals with various types of complex analytic coordinates for them This is the first book in which a complete exposition is given of the most basic fact that the Bers projection from Beltrami differentials onto Teichmüller space is a complex analytic submersion The fundamental universal property enjoyed by Teichmüller space is given two proofs and the Bers complex boundary is examined to the point where totally degenerate Kleinian groups make their spectacular appearance Contains much material previously unpublished **The William Lowell Putnam Mathematical Competition Problems and Solutions** Andrew M. Gleason, R. E.

Greenwood, Leroy Milton Kelly, 1980 Back by popular demand the MAA is pleased to reissue this outstanding collection of problems and solutions from the Putnam Competitions covering the years 1938-1964 Problemists the world over including all past and future Putnam Competitors will revel in mastering the difficulties posed by this collection of problems from the first 25 William Lowell Putnam Competitions Solutions to all 347 problems are given In some cases multiple solutions are included some which contestants could reasonably be expected to find under examination conditions and others which are more

elegant or utilize more sophisticated techniques Valuable references and historical comments on many of the problems are presented The book concludes with four articles on the Putnam competition written by G Birkhoff L E Bush L J Mordell and L M Kelly which are reprinted from the American Mathematical Monthly There is great appeal here for all teachers students and all those who love good problems and see them as an entree to beautiful and powerful ideas Back cover

Nonlinear Diffusion Equations and Their Equilibrium States II W.-M. Ni,L.A. Peletier,James Serrin,1988-06-24 In recent years considerable interest has been focused on nonlinear diffusion problems the archetypical equation for these being $U_t - \Delta u = f(u)$ Here denotes the n dimensional Laplacian the solution $u(x,t)$ is defined over some space time domain of the form $n \times O \times T$ and $f(u)$ is a given real function whose form is determined by various physical and mathematical applications These applications have become more varied and widespread as problem after problem has been shown to lead to an equation of this type or to its time independent counterpart the elliptic equation of equilibrium $\Delta u = f(u)$ Particular cases arise for example in population genetics the physics of nuclear stability phase transitions between liquids and gases flows in porous media the Lend Emden equation of astrophysics various simplified combustion models and in determining metrics which realize given scalar or Gaussian curvatures In the latter direction for example the problem of finding conformal metrics with prescribed curvature leads to a ground state problem involving critical exponents Thus not only analysts but geometers as well can find common ground in the present work The corresponding mathematical problem is to determine how the structure of the nonlinear function $f(u)$ influences the behavior of the solution
