Econometric Analysis Of Panel Data:

Econometric Analysis of Panel Data Badi Baltagi, 2008-06-30 Written by one of the world's leading researchers and writers in the field *Econometric Analysis of Panel Data* has become established as the leading textbook for postgraduate courses in panel data. This new edition reflects the rapid developments in the field covering the vast research that has been conducted on panel data since its initial publication. Featuring the most recent empirical examples from panel data literature, data sets are also provided as well as the programs to implement the estimation and testing procedures described in the book. These programs will be made available via an accompanying website which will also contain solutions to end of chapter exercises that will appear in the book. The text has been fully updated with new material on dynamic panel data models and recent results on non-linear panel models and in particular work on limited dependent variables panel data models.

Econometric Analysis of Panel Data Badi H. Baltagi, 2021-03-16 This textbook offers a comprehensive introduction to panel data econometrics, an area that has enjoyed considerable growth over the last two decades. Micro and Macro panels are becoming increasingly available and methods for dealing with these types of data are in high demand among practitioners. Software programs have fostered this growth including freely available programs in R and numerous user-written programs in both Stata and EViews. Written by one of the world's leading researchers and authors in the field, *Econometric Analysis of Panel Data* has established itself as the leading textbook for graduate and postgraduate courses on panel data. It provides up-to-date coverage of basic panel data techniques illustrated with real economic applications and datasets which are available at the book's website on springer.com. This new sixth edition has been fully revised and updated and includes new material on dynamic panels, limited dependent variables, and nonstationary panels, as well as spatial panel data. The author also provides empirical illustrations and examples using Stata and EViews. This is a definitive book written by one of the architects of modern panel data econometrics. It provides both a practical introduction to the subject matter as well as a thorough discussion of the underlying statistical principles without taxing the reader too greatly. Professor Kajal Lahiri, State University of New York Albany, USA. This book is the most comprehensive work available on panel data. It is written by one of the leading contributors to the field and is notable for its encyclopaedic coverage and its clarity of exposition. It is useful to theorists and to people doing applied work using panel data. It is valuable as a text for a course in panel data, as a supplementary text for more general courses in econometrics, and as a reference. Professor Peter Schmidt, Michigan State University, USA. Panel data econometrics is in its ascendancy, combining the power of cross-section averaging with all the subtleties of temporal and spatial dependence. Badi Baltagi provides a remarkable roadmap of this fascinating interface of econometric method, enticing the novice with technical gentleness, the expert with comprehensive coverage, and the practitioner with many empirical applications. Professor Peter C. B. Phillips, Cowles Foundation, Yale University, USA.

A Companion to Econometric Analysis of Panel Data Badi H. Baltagi,2009-06-22 This book is a companion to Baltagi s 2008 leading graduate econometrics textbook on panel data entitled *Econometric Analysis of Panel Data 4th Edition* The book guides the student of panel data econometrics by solving exercises in a logical and pedagogical manner helping the reader understand learn and apply panel data methods It is also a helpful tool for those who like to learn by solving exercises and running software to replicate empirical studies It works as a complementary study guide to Baltagi 2008 and also as a stand alone book that builds up the reader s confidence in working out difficult exercises in panel data econometrics and applying these methods to empirical work The exercises start by providing some background information on partitioned regressions and the Frisch Waugh Lovell theorem Then it goes through the basic material on fixed and random effects models in a one way and two way error components models basic estimation test of hypotheses and prediction This include maximum likelihood estimation testing for poolability of the data testing for the significance of individual and time effects as well as Hausman s test for correlated effects It also provides extensions of panel data techniques to serial correlation spatial correlation heteroskedasticity seemingly unrelated regressions simultaneous equations dynamic panel models incomplete panels measurement error count panels rotating panels limited dependent variables and non stationary panels

Econometric Analysis of Panel Data Badi H. Essays in Panel Data Econometrics Marc Nerlove, 2005-11-10 This volume collects seven of Marc Nerlove's previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 *Econometrica* paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical

models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods

Econometric Analysis of Panel Data Models with Multifactor Error Structures Hande Karabiyik, Franz C. Palm, Jean-Pierre Urbain, 2019 Economic panel data often exhibit cross sectional dependence even after conditioning on appropriate explanatory variables Two approaches to modeling cross sectional dependence in economic panel data are often used the spatial dependence approach which explains cross sectional dependence in terms of distance among units and the residual multifactor approach which explains cross sectional dependence by common factors that affect individuals to a different extent This article reviews the theory on estimation and statistical inference for stationary and nonstationary panel data with cross sectional dependence particularly for models with a multifactor error structure Tests and diagnostics for testing for unit roots slope homogeneity cointegration and the number of factors are provided We discuss issues such as estimating common factors dealing with parameter plethora in practice testing for structural stability and nonlinearity and dealing with model and parameter uncertainty Finally we address issues related to the use of these economic panel models

Econometrics of Panel Data Erik Biørn, 2016-10-17 Panel data is a data type increasingly used in research in economics social sciences and medicine Its primary characteristic is that the data variation goes jointly over space across individuals firms countries etc and time over years months etc Panel data allow examination of problems that cannot be handled by cross section data or time series data Panel data analysis is a core field in modern econometrics and multivariate statistics and studies based on such data occupy a growing part of the field in many other disciplines The book is intended as a text for master and advanced undergraduate courses It may also be useful for PhD students writing theses in empirical and applied economics and readers conducting empirical work on their own The book attempts to take the reader gradually from simple models and methods in scalar simple vector notation to more complex models in matrix notation A distinctive feature is that more attention is given to unbalanced panel data the measurement error problem random coefficient approaches the interface between panel data and aggregation and the interface between unbalanced panels and truncated and censored data sets The 12 chapters are intended to be largely self contained although there is also natural progression Most of the chapters contain commented examples based on genuine data mainly taken from panel data applications to economics Although the book inter alia through its use of examples is aimed primarily at students of economics and econometrics it may also be useful for readers in social sciences psychology and medicine provided they have a sufficient background in statistics notably basic regression analysis and elementary linear algebra

ECONOMETRIC MODELS WITH PANEL DATA. APPLICATIONS WITH STATA CESAR PEREZ LOPEZ, 2022 This book explores the panel data econometrics through STATA The most important topics are the following Linear regression estimators in panel data models fixed and random effects heteroskedasticity and autocorrelation in panel data models

instrumental variables and two stage least squares in panel data models dynamic panel data models logit and probit panel data models censored panel data models count panel data models Tobit panel data models Poisson panel data models negative binomial panel data models and others models with panel data

Essays on the Econometric Analysis of Panel Data Keisuke Hirano,1998

The Econometric Analysis of Non-Stationary Spatial Panel Data Michael Beenstock,Daniel Felsenstein,2019-03-27 This monograph deals with spatially dependent nonstationary time series in a way accessible to both time series econometricians wanting to understand spatial econometrics and spatial econometricians lacking a grounding in time series analysis After charting key concepts in both time series and spatial econometrics the book discusses how the spatial connectivity matrix can be estimated using spatial panel data instead of assuming it to be exogenously fixed This is followed by a discussion of spatial nonstationarity in spatial cross section data and a full exposition of non stationarity in both single and multi equation contexts including the estimation and simulation of spatial vector autoregression VAR models and spatial error correction ECM models The book reviews the literature on panel unit root tests and panel cointegration tests for spatially independent data and for data that are strongly spatially dependent It provides for the first time critical valuesfor panel unit root tests and panel cointegration tests when the spatial panel data are weakly or spatially dependent The volume concludes with a discussion of incorporating strong and weak spatial dependence in non stationary panel data models All discussions are accompanied by empirical testing based on a spatial panel data of house prices in Israel

Baltagi,2006-04-01 This volume includes some of the papers presented at the 11th International Conference on Panel Data Texas June 2004 and other solicited papers that passed the refereeing process and includes such topics as dynamic panel data estimation non linear panel data methods and the phenomenal growth in non stationary panel data econometrics

Panel Data Econometrics Donggyu Sul,2019-02-07 In the last 20 years econometric theory on panel data has developed rapidly particularly for analyzing common behaviors among individuals over time Meanwhile the statistical methods employed by applied researchers have not kept up to date This book attempts to fill in this gap by teaching researchers how to use the latest panel estimation methods correctly Almost all applied economics articles use panel data or panel regressions However many empirical results from typical panel data analyses are not correctly executed This book aims to help applied researchers to run panel regressions correctly and avoid common mistakes The book explains how to model cross sectional dependence how to estimate a few key common variables and how to identify them It also provides guidance on how to separate out the long run relationship and common dynamic and idiosyncratic dynamic relationships from a set of panel data Aimed at applied researchers who want to learn about panel data econometrics by running statistical software this book provides clear guidance and is supported by a full range of online teaching and learning materials It includes practice sections on MATLAB STATA and GAUSS throughout along with short and

simple econometric theories on basic panel regressions for those who are unfamiliar with econometric theory on traditional panel regressions

Applied Econometric Analysis Using Cross Section and Panel Data Deep Mukherjee, 2024-01-03 This book is a collection of 20 chapters on chosen topics from cross section and panel data econometrics. It explores both theoretical and practical aspects of selected cutting edge techniques which are gaining popularity among applied econometricians while following the motto of keeping things simple. Each chapter gives a basic introduction to one such method, directs readers to supplementary references, and shows an application. The book takes into account that the field of econometrics is evolving very fast and leading textbooks are trying to cover some of the recent developments in revised editions. This book offers a basic introduction to state of the art techniques and recent advances in econometric models with detailed applications from various developing and developed countries.

An applied researcher or practitioner may prefer reference books with a simple introduction to an advanced econometric method or model with no theorems but with a longer discussion on empirical application. Thus an applied econometrics textbook covering these cutting edge methods is highly warranted. This book attempts to fill the void. The book does not aim at providing a comprehensive coverage of econometric methods. The 20 chapters in this book represent only a sample of the important topics in modern econometrics with special focus on econometrics of cross section and panel data while also recognizing that it is not possible to accommodate all types of models and methods even in these two categories. The book is unique as authors have also provided the theoretical background if any and brief literature review behind the empirical applications. It is a must have resource for students and practitioners of modern econometrics.

Panel Data Econometrics Mike Tsionas, 2019-06-20 *Panel Data Econometrics: Empirical Applications* introduces econometric modelling. Written by experts from diverse disciplines, the volume uses longitudinal datasets to illuminate applications for a variety of fields such as banking, financial markets, tourism, and transportation, auctions, and experimental economics. Contributors emphasize techniques and applications, and they accompany their explanations with case studies, empirical exercises, and supplementary code in R. They also address panel data analysis in the context of productivity and efficiency analysis, where some of the most interesting applications and advancements have recently been made. Provides a vast array of empirical applications useful to practitioners from different application environments. Accompanied by extensive case studies and empirical exercises. Includes empirical chapters accompanied by supplementary code in R, helping researchers replicate findings. Represents an accessible resource for diverse industries including health, transportation, tourism, economic growth, and banking, where researchers are not always econometrics experts.
