

1A. WHAT IS MANAGERIAL ECONOMICS

Managerial Economics has been generally defined as the study of economic theories, logic and tools of economic analysis, used in the process of business decision making. It involves the understanding and use of economic theories and techniques of economic analysis in analyzing and solving business problems.

Economic principles contribute significantly towards the performance of managerial duties as well as responsibilities. Managers with some working knowledge of economics can perform their functions more effectively and efficiently than those without such knowledge.

In addition, managerial economics is a discipline, which requires the application of economics in the complex business decision-making process to formulate and achieve rational managerial objectives.

Managerial economics can be thought of as applied microeconomics though, to some extent, macroeconomics is also relevant at some stages.

1B. WHY THE NEED FOR MANAGERIAL ECONOMICS

There are three major contributions of economic theory to business economics have been enumerated:

- I. Building of analytical models: that help to recognize the structure of managerial problems, eliminate the minor details that can obstruct decision making, and help to concentrate on the main problem area.
- II. Making available a set of analytical methods for business analyses thereby enhancing the analytical capabilities of the business analyst.
