Nuclear Pore Complexes in Genome Organization, Function and Maintenance Maximiliano D'Angelo, 2018-02-02 The three dimensional organization of the DNA inside the eukaryotic cell nucleus has emerged a critical regulator of genome integrity and function Increasing evidence indicates that nuclear pore complexes NPCs the large protein channels that connect the nucleus to the cytoplasm play a critical role in the establishment and maintenance of chromatin organization and in the regulation of gene activity These findings which oppose the traditional view of NPCs as channels with only one the facilitation of nucleocytoplasmic molecule exchange have completely transformed our understanding of these structures This book describes our current knowledge of the role of NPCs in genome organization and gene expression regulation It starts by providing an overview of the different compartments and structures of the nucleus and how they contribute to organizing the genome then moves to examine the direct roles of NPCs and their components in gene expression regulation in different organisms and ends by describing the function of nuclear pores in the infection and genome integration of HIV in DNA repair and telomere maintenance and in the regulation of chromosome segregation and mitosis This book provides an intellectual backdrop for anyone interested in understanding how the gatekeepers of the nucleus contribute to safeguarding the integrity and function of the eukaryotic genome

Jorg Dietrich, Tim-Henrik Bruun, Ulrich - Bogdahn, Anna Klingseisen, 2023-06-29 *Role of Stem Cells in Skeletal Muscle Development, Regeneration, Repair, Aging and Disease* Pura Muñoz-Cánoves, Jaime J. Carvajal, Adolfo Lopez de Munain, Ander Izeta, 2016-06-29 Adult stem cells are responsible for tissue regeneration and repair throughout life Their quiescence or activation are tightly regulated by common signalling pathways that often recapitulate those happening during embryonic development and thus it is important to understand their regulation not only in postnatal life but also during foetal development In this regard skeletal muscle is an interesting tissue since it accounts for a large percentage of body mass about 40% it is highly amenable to intervention through exercise and it is also key in metabolic and physiological changes underlying frailty susceptibility in the elderly While muscle resident satellite cells are responsible for all myogenic activity in physiological conditions and become senescent in old age other progenitor cells such as mesoangioblasts do seem to contribute to muscle regeneration and repair after tissue damage Similarly fibro adipogenic precursor cells seem to be key in the aberrant response that fills up the space left from atrophied muscle mass and which ends up with a dysfunctional muscle having vast areas of fatty infiltration and fibrosis The complex interplay between these stem progenitor cell types and their niches in normal and pathological conditions throughout life are the subjects of intense investigation This eBook highlights recent developments on the role of stem cells in skeletal muscle function both in prenatal and postnatal life and their regulation by transcriptional post transcriptional and epigenetic mechanisms Additionally it includes articles on interventions associated with exercise pathological changes in neuromuscular diseases and stem cell aging
