Proceedings of the ASME Heat Transfer Division R. A. Nelson, 1998 **Compact Heat Exchangers and Enhancement Technology for the Process Industries** R. K. Shah, 1999 The drive to minimize capital investment and improve the energy efficiency of process industry plants has led to a reassessment of the desirability and practicality of incorporating compact heat exchangers CHEs and heat transfer enhancement technology into process plants This volume collects papers presented at the International Conference on Compact Heat Exchangers for the Process Industries whose objectives were to exploit the existing forms of the CHEs and enhancement technology with their potential use and benefits to identify new forms of the CHEs and enhancement technology and to identify and discuss barriers and critical issues preventing the broader use of

CHEs and enhancement technology Advanced Heat Exchangers J-M. Buchlin, Léon Bolle, 2002 **Thermal Design of Heat Exchangers: A Numerical Approach** Eric M. Smith, 1997 This book is unique in adopting a numerical approach to the thermal design of heat exchangers The computation of mean temperature difference with accommodation of longitudinal conduction effects makes full optimisation of the exchanger core possible Sets of three partial differential equations for both contra flow and cross flow are established and form the bases from which a range of methods of direct sizing and stepwise rating may proceed Optimisation of an exchanger for steady state operation is achieved by an approach which allows maximum utilisation of the allowable pressure losses Transient methods are covered including the Method of Characteristics and the Single Blow method of testing is treated Numerous aspects of low and high temperature design are discussed and extensive references to the literature are provided Schematic algorithms are listed to allow students and practitioners to construct their own solutions and spline fitting of data is discussed **Heat Transfer and Hydraulic Resistance at Supercritical Pressures in Power Engineering Applications** Igor' Leonardovich Pioro, Romney B.
