**Collaborative Application Lifecycle Management with IBM Rational Products** Mats Gothe,2008

**Integration of Performance Management into the Application Lifecycle** Eduard Tudenhöfner,2011-09-15 Inhaltsangabe Introduction Despite the widespread recognition that performance is important to the success of a project many software products fail to respond fast enough to user requests or to handle a certain amount of parallel business transactions This is because nowadays projects are result oriented where the focus is on functionality to be implemented Such projects do not pay high attention to application performance because it still does not have the particular importance that unit testing for example has Moreover today s development models usually consider performance management only in a limited way within their lifecycle and often follow what is known as the fix it later approach The fix it later approach concentrates on software correctness and defers performance considerations to the integration testing phase where additional hardware is added or a system is tuned when performance issues are detected The problem of neglecting performance management is that performance issues often do not emerge until an application is put into production where it is likely to suffer the consequences of a performance failure The consequences of performance failures can be increased operational costs increased development and hardware costs and damaged customer relations If

severe performance issues are discovered during production it may be too expensive to re design a system or even impossible to add additional hardware in order to meet performance objectives Such projects are likely to be canceled and their costs will be unrecoverable To avoid such situations performance management should be integrated into an application s lifecycle from the beginning This means that performance objectives have to be defined early within a project and continually verified as an application evolves Having performance management integrated from the beginning allows to reduce overall project risk and costs because performance issues can be spotted and corrected early in the lifecycle and even before end users are affected Furthermore an application is extensively tested for its ability of reaching performance objectives before it is deployed to a production environment and exposed to real users NovaTec GmbH is a company providing IT services in the area of consulting project management software engineering application architectures provisioning performance management and process engineering The competences of NovaTec are logically grouped in [Lifecycle 233 Success Secrets - 233 Most Asked Questions on Lifecycle - What You Need to Know](#) Albert Solomon,2014-10-11 The latest Lifecycle sensation There has never been a Lifecycle Guide like this It contains 233 answers much more than you can imagine comprehensive answers and extensive details and references with insights that have never before been offered in print Get the information you need fast This all embracing guide offers a thorough view of key knowledge and detailed insight This Guide introduces what you want to know about Lifecycle A quick look inside of some of the subjects covered Information Lifecycle Management Infrastructure Closed loop lifecycle management Top down design Product lifecycle management Forms Urochordata Lifecycle Identity Lifecycle Manager Closed loop lifecycle management Use operate maintain support sustain phase out retire recycle and disposal Human centered design User centered design in product lifecycle management systems Product lifecycle management Front loading design and workflow Closed loop lifecycle management User skills Product lifecycle Decline Closed loop lifecycle management Introduction to development process Product lifecycle management Further reading SOA Lifecycle Service composition architecture Windows Server 2003 Support lifecycle Open Services for Lifecycle Collaboration List of proprietary software for Linux Product data product lifecycle management Product Data ManagementPDM Product Lifecycle ManagementPLM HP Application Lifecycle Management Multi environment Support Polar bear Reproduction and lifecycle IBM General Parallel File System Information lifecycle management Product lifecycle Saturation System lifecycle Detail design and development Product lifecycle management Use operate maintain support sustain phase out retire recycle and disposal and much more [Proprietary Version Control Systems](#) Source Wikipedia,2013-09 Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online Pages 25 Chapters AccuRev SCM Adobe Version Cue BitKeeper CA Software Change Manager Code Co op Endeavor Gomidjets IBM Configuration Management Version Control CMVC IBM Rational ClearCase IBM Rational ClearCase UCM IBM Rational MultiVersion File System IC Manage Microsoft Visual SourceSafe MKS Integrity
