Complex Analysis and Potential Theory Tahir Aliyev Azeroglu, 2007 This volume gathers the contributions from outstanding mathematicians such as Samuel Krushkal Reiner Kuhnau Chung Chun Yang Vladimir Miklyukov and others It will help researchers to solve problems on complex analysis and potential theory and discuss various applications in engineering The contributions also update the reader on recent developments in the field Moreover a special part of the volume is completely devoted to the formulation of some important open problems and interesting conjectures *Complex Analysis And Potential Theory - Proceedings Of The Conference Satellite To Icm 2006* T Aliyev Azeroglu, Promarzh M Tamrazov, 2007-08-13 This volume gathers the contributions from outstanding mathematicians such as Samuel Krushkal Reiner Kuhnau Chung Chun Yang Vladimir Miklyukov and others It will help researchers to solve problems on complex analysis and potential theory and discuss various applications in engineering The contributions also update the reader on recent developments in the field Moreover a special part of the volume is completely devoted to the formulation of some important open problems and interesting conjectures

Nevanlinna Theory, Normal Families, and Algebraic Differential Equations Norbert Steinmetz, 2017-07-24 This book offers a modern introduction to Nevanlinna theory and its intricate relation to the theory of normal families algebraic functions asymptotic series and algebraic differential equations Following a comprehensive treatment of Nevanlinna's theory of value distribution the author presents advances made since Hayman's work on the value distribution of differential polynomials and illustrates how value and pair sharing problems are linked to algebraic curves and Briot Bouquet differential equations In addition to discussing classical applications of Nevanlinna theory the book outlines state of the art research such as the effect of the Yosida and Zalcmán Pang method of rescaling to algebraic differential equations and presents the Painlevé-Yosida theorem which relates Painlevé transcendents and solutions to selected 2D Hamiltonian systems to certain Yosida classes of meromorphic functions Aimed at graduate students interested in recent developments in the field and researchers working on related problems Nevanlinna Theory Normal Families and Algebraic Differential Equations will also be of interest to complex analysts looking for an introduction to various topics in the subject area With examples exercises and proofs seamlessly intertwined with the body of the text this book is particularly suitable for the more advanced reader

The Analysis of Solutions of Elliptic Equations Nikolai Tarkhanov, 2013-03-09 This book is intended as a continuation of my book *Parametrix Method in the Theory of Differential Complexes* see 291 There we considered complexes of differential operators between sections of vector bundles and we strived more than for details Although there are many applications to for maximal generality overdetermined systems such an approach left me with a certain feeling of dissatisfaction especially since a large number of interesting consequences can be obtained without a great effort The present book is conceived as an attempt to shed some light on these new applications We consider as a rule differential operators having a simple structure on open subsets of \mathbb{R}^n Currently this area is not being

investigated very actively possibly because it is already very highly developed actively cf for example the book of Palamodov 213 However even in this well studied situation the general ideas from 291 allow us to obtain new results in the qualitative theory of differential equations and frequently in definitive form The greater part of the material presented is related to applications of the L rent series for a solution of a system of differential equations which is a convenient way of writing the Green formula The culminating application is an analog of the theorem of Vitushkin 303 for uniform and mean approximation by solutions of an elliptic system Somewhat afield are several questions on ill posedness but the parametrix method enables us to obtain here a series of hitherto unknown facts

The William Lowell Putnam Mathematical Competition Problems and Solutions Andrew M.

Gleason,R. E. Greenwood,Leroy Milton Kelly,1980 Back by popular demand the MAA is pleased to reissue this outstanding collection of problems and solutions from the Putnam Competitions covering the years 1938 1964 Problemists the world over including all past and future Putnam Competitors will revel in mastering the difficulties posed by this collection of problems from the first 25 William Lowell Putnam Competitions Solutions to all 347 problems are given In some cases multiple solutions are included some which contestants could reasonably be expected to find under examination conditions and others which are more elegant or utilize more sophisticated techniques Valuable references and historical comments on many of the problems are presented The book concludes with four articles on the Putnam competition written by G Birkhoff L E Bush L J Mordell and L M Kelly which are reprinted from the American Mathematical Monthly There is great appeal here for all teachers students and all those who love good problems and see them as an entree to beautiful and powerful ideas Back cover

Global Analysis of Minimal Surfaces Ulrich Dierkes,Stefan

Hildebrandt,Anthony Tromba,2010-08-16 Many properties of minimal surfaces are of a global nature and this is already true for the results treated in the first two volumes of the treatise Part I of the present book can be viewed as an extension of these results For instance the first two chapters deal with existence regularity and uniqueness theorems for minimal surfaces with partially free boundaries Here one of the main features is the possibility of edge crawling along free parts of the boundary The third chapter deals with a priori estimates for minimal surfaces in higher dimensions and for minimizers of singular integrals related to the area functional In particular far reaching Bernstein theorems are derived The second part of the book contains what one might justly call a global theory of minimal surfaces as envisioned by Smale First the Douglas problem is treated anew by using Teichm ller theory Secondly various index theorems for minimal theorems are derived and their consequences for the space of solutions to Plateau s problem are discussed Finally a topological approach to minimal surfaces via Fredholm vector fields in the spirit of Smale is presented

Proceedings of the Conference on Complex

Complex Analysis Joensuu 1987 Ilpo Laine, Seppo Rickman, Tuomas Sorvali, 1988-10 The articles in this volume are for the most part research articles related mainly to the theory of quasiconformal and quasiregular mappings Riemann surfaces and potential theory They have resulted from talks delivered at the 13th Nevanlinna Colloquium which was also a celebration of the 80th birthday of Lars V Ahlfors hence many articles in this volume reflect his mathematical interests
