### PROCEEDINGS OF THE 21ST CONFERENCE ON FORMAL METHODS IN COMPUTER-AIDED DESIGN - FMCAD 2021

Michael W. Whalen,Ruzica Piskac,2021-10-14 Our life is dominated by hardware a USB stick the processor in our laptops or the SIM card in our smart phone But who or what makes sure that these systems work stably safely and securely from the word go The computer with a little help from humans The overall name for this is CAD computer aided design and it s become hard to imagine our modern industrial world without it So how can we be sure that the hardware and computer systems we use are reliable By using formal methods these are techniques and tools to calculate whether a system description is in itself consistent or whether requirements have been developed and implemented correctly Or to put it another way they can be used to check the safety and security of hardware and software Just how this works in real life was also of interest at the annual conference on Formal Methods in Computer Aided Design FMCAD Under the direction of Ruzica Piskac and Michael Whalen the 21st Conference in October 2021 addressed the results of the latest research in the field of formal methods A volume of conference proceedings with over 30 articles covering a wide range of formal methods has now been published for this online conference starting from the verification of hardware parallel and distributed systems as well as neuronal networks right through to machine learning and decision making procedures This volume provides a fascinating insight into revolutionary methods technologies theoretical results and tools for formal logic in computer systems and system developments

A variety of programming models relevant to scientists explained with an emphasis on how programming constructs map to parts of the computer What makes computer programs fast or slow To answer this question we have to get behind the abstractions of programming languages and look at how a computer really works This book examines and explains a variety of scientific programming models programming models relevant to scientists with an emphasis on how programming constructs map to different parts of the computer s architecture Two themes emerge program speed and program modularity Throughout this book the premise is to get under the hood and the discussion is tied to specific programs The book digs into linkers compilers operating systems and computer architecture to understand how

the different parts of the computer interact with programs It begins with a review of C C and explanations of how libraries linkers and Makefiles work Programming models covered include Pthreads OpenMP MPI TCP IP and CUDA The emphasis on how computers work leads the reader into computer architecture and occasionally into the operating system kernel The operating system studied is Linux the preferred platform for scientific computing Linux is also open source which allows users to peer into its inner workings A brief appendix provides a useful table of machines used to time programs The book s website [https://github.com/divakarvi/bk\\_spc](https://github.com/divakarvi/bk_spc) has all the programs described in the book as well as a link to the html text
