

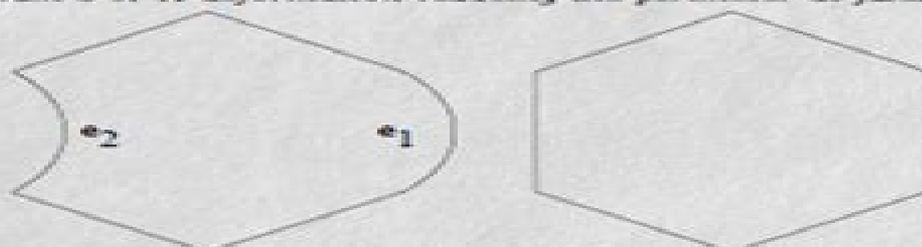

Diagram 5-b. A deformation reducing the perimeter at fixed area.

If any $x(e) < -\tau_0$, we decrease the curvature of e until $x(e) = -\tau_0$. This leaves $T(P)$ unchanged, decreases the perimeter, and increases $\text{area}(P)$. Thus, there is no loss in generality, if we assume $x(e) \geq -\tau_0$ for all e .

We leave edges e with $x(e) > \tau_0$ untouched.

If there are two edges e_1, e_2 of P with $0 < x(e_1) \leq \tau_0$ and $x(e_2) < 0$ (and so also $x(e_2) \geq -\tau_0$), we deform P by decreasing the curvature of the arcs e_1 and e_2 preserving $x(e_1) + x(e_2)$, thereby decreasing the perimeter $L(P)$ (see Diagram 5-b). $T(P)$ is unchanged. Continuing in this way, we may assume without loss of generality that all $x(e) \in [-\tau_0, \tau_0]$ have the same sign. We consider two cases depending on whether there is an edge e with $x(e) > \tau_0$.

(Case I) For all e , $x(e) \geq -\tau_0$, and there exists e such that $x(e) > \tau_0$. All $x(e) \in [-\tau_0, \tau_0]$ have the same sign.

(Case II) For all e , $|x(e)| \leq \tau_0$. All $x(e)$ have the same sign.

The theorem will be proved by a separate argument for the two cases.

6. LOWER BOUNDS ON $L(P)$.

We were not able to find a single estimate of $L(P)$ that leads to the Theorem in all cases. Instead, we rely on number of lower bounds on $L(P)$ (and $\Delta(P)$). Most are based on the isoperimetric inequality.

Lower bound $L(N, \alpha, X)$. $N = 3, 4, \dots$ The perimeter of a regular N -gon of area 1 is $2\sqrt{\pi_N}$, where $\pi_N = N \tan(\pi/N)$. The polygon (f_1, \dots, f_N) has area at least $\alpha - X$. By the isoperimetric inequality for polygons, it has perimeter at least

$$L(N, \alpha, X) := 2\sqrt{(\alpha - X)\pi_N}.$$

Each arc e_i has length at least that of f_i , so $L(P) \geq L(N, \alpha, X(P))$.

Lower bound L_+ . By the isoperimetric inequality,

$$L(P) \geq L_+(\alpha) := 2\sqrt{\pi\alpha},$$

the perimeter of a circle of area α .

Conjecture And Proof:

Conjecture and Proof Miklós Laczkovich, 2022-08-11 The Budapest semesters in mathematics were initiated with the aim of offering undergraduate courses that convey the tradition of Hungarian mathematics to English speaking students This book is an elaborate version of the course on Conjecture and Proof It gives miniature introductions to various areas of mathematics by presenting some interesting and important but easily accessible results and methods The text contains complete proofs of deep results such as the transcendence of e the Banach Tarski paradox and the existence of Borel sets of arbitrary finite class One of the purposes is to demonstrate how far one can get from the first principles in just a couple of steps Prerequisites are kept to a minimum and any introductory calculus course provides the necessary background for understanding the book Exercises are included for the benefit of students However this book should prove fascinating for any mathematically literate reader

Explanation and Proof in Mathematics assembles perspectives from mathematics education and from the philosophy and history of mathematics to strengthen mutual awareness and share recent findings and advances in their interrelated fields. With examples ranging from the geometers of the 17th century and ancient Chinese algorithms to cognitive psychology and current educational practice contributors explore the role of refutation in generating proofs, the varied links between experiment and deduction, the use of diagrammatic thinking in addition to pure logic, and the uses of proof in mathematics education, including a critique of authoritative versus authoritarian teaching styles. A sampling of the coverage: The conjoint origins of proof and theoretical physics in ancient Greece; Proof as bearers of mathematical knowledge; Bridging knowing and proving in mathematical reasoning; The role of mathematics in long term cognitive development of reasoning; Proof as experiment in the work of Wittgenstein; Relationships between mathematical proof, problem solving and explanation. Explanation and Proof in Mathematics is certain to attract a wide range of readers including mathematicians, mathematics education professionals, researchers, students, and philosophers and historians of mathematics.

The Kepler Conjecture, 2011-11-09
The Kepler Conjecture Jeffrey C. Lagarias, 2011-11-09
The Kepler conjecture, one of geometry's oldest unsolved problems, was formulated in 1611 by Johannes Kepler and mentioned by Hilbert in his famous 1900 problem list. The Kepler conjecture states that the densest packing of three-dimensional Euclidean space by equal spheres is attained by the cannonball packing. In a landmark result, this was proved by Thomas C. Hales and Samuel P. Ferguson using an analytic argument completed with extensive use of computers. This book centers around six papers presenting the detailed proof of the Kepler conjecture given by Hales and Ferguson, published in 2006 in a special issue of *Discrete Computational Geometry*. Further supporting material is also presented, a follow-up paper of Hales et al. (2010) revising the proof and describing progress towards a formal proof of the Kepler conjecture. For historical reasons, this book also includes two early papers of Hales that indicate his original approach to the conjecture. The editor's two introductory chapters situate the conjecture in a broader historical and mathematical context. These chapters provide a valuable perspective and are a key feature of this work.

Curricular Resources and Classroom Use Gabriel J. Stylianides, 2016-05-06
Curricular resources include the different kinds of materials, digital or physical, that teachers use in or for their teaching: textbooks, lesson plans, etc., and have a significant influence on students' opportunities to learn. At the same time, teachers play a crucial role as interpreters of such materials, so there is a complex relationship between curricular resources and their classroom use. This book aims to bridge these rather disconnected but highly related programs of research by describing, comparing, and exemplifying new research approaches for studying in connected ways both curricular resources and their classroom use, thereby supporting also investigation of the complex interplay between the two. In addition to implications for research, the book has implications for curriculum development and teacher education. Specifically, the book deepens understanding of how curriculum developers can better exploit the potential of curricular resources to support classroom work and how teacher educators can better

support teachers to use curricular resources in the classroom
