Flow Modelling and Control in Pipeline Systems Sina Razvarz, Raheleh

Jafari,Alexander Gegov,2020-10-01 This book introduces novel methods for leak and blockage detection in pipelines The leak happens as a result of ageing pipelines or extreme pressure forced by operational error or valve rapid variation Many factors influence blockage formation in pipes like wax deposition that leads to the formation and eventual growth of solid layers and deposition of suspended solid particles in the fluids In this book initially different categories of leak detection are overviewed Afterwards the observability and controllability of pipeline systems are analysed Control variables can be usually presented by pressure and flow rates at the start and end points of the pipe Different cases are considered based on the selection of control variables to model the system Several theorems are presented to test the observability and controllability of the system In this book the leakage flow in the pipelines is studied numerically to find the relationship between leakage flow and pressure difference Removing leakage completely is almost impossible hence the development of a formal systematic leakage control policy is the most reliable approach to reducing leakage rates *Facility Piping Systems Handbook* Michael L.
