

The background of the cover is a photograph of two cranes in flight over a wetland. The cranes are captured in mid-flight, with their wings fully extended, showing the intricate patterns of their feathers. The lighting is warm, suggesting a sunset or sunrise, with a golden glow on the birds and the water. In the background, several ducks are visible on the water, and the horizon is a mix of dark and light tones. The overall mood is serene and natural.

Ecological Explosions Daniel Simberloff, 2026-01-16 A leading biologist offers a comprehensive and accessible history of invasive species science from its earliest antecedents through its current research foci and controversies From the arrival of the naval shipworm in the Black Sea in the first millennium BC to the escape of the Burmese python in Florida in 1992 humans have moved species to new locations deliberately or inadvertently for thousands of years Agricultural and environmental impacts of some invasions were evident early although whether observers recognized that the cause was an introduced species is uncertain The history of invasion biology truly begins in the sixteenth through eighteenth centuries when explorers noticed European species on various distant islands and in North America In the nineteenth century biogeographers studying species distributions across the globe introduced the first native and non native species categorizations and prominent researchers like Charles Darwin began to describe the impacts of introduced species In the nineteenth and twentieth centuries as humans moved increasing numbers of species across the globe the advent of modern ecology deepened our understanding of the scope of the problem In Ecological Explosions invasive species expert Daniel Simberloff provides a thorough overview of the development of invasion science from early research including from the perspectives of leading scientists like Aldo Leopold to the field's future Simberloff explores the work of pioneering ecologists like Charles Elton antecedents of what became today's invasion biology before discussing the field's true emergence in the 1980s its explosive methodological and theoretical expansion its integration with other disciplines and its increasing visibility not only within the biological literature but also in government policies across the world in the 1990s Finally he investigates current controversies such as the debate over whether the entire science is xenophobic and asks how ecosystems might adapt to a rapidly globalizing world and ever increasing numbers of introduced species including the joro spider lionfish spotted lanternfly common reed and Asian carp

Botkin,1990 Global warming acid rain the depletion of forests the polluting of our atmosphere and oceans the threats to our environment are numerous raising justifiable concern among most of us and genuine alarm in some But as scientist Daniel Botkin argues in this provocative new book our ability to solve these problems is limited not by our scientific knowledge but by the age old myths and metaphors that shape our perception of the natural world Indeed our beliefs about nature have fallen well behind our knowledge Daniel Botkin is a seasoned scientist He has spent three decades in the field studying the changes and interactions of forests and animal species In the 1960s he pioneered the use of computers to predict ecological trends Now in *Discordant Harmonies* he combines his considerable expertise with the well honed eye of the nature writer and a philosopher's sense of how ideas shape our perceptions of reality to take us on a marvelous guided tour of the natural world His method is to introduce a problem in our beliefs about nature by giving us a fascinating case study of predator prey relationships of forests evolving over centuries of species nearing extinction of the ways our protection of nature has had surprising and often disappointing results Botkin's revealing case studies also highlight controversial present day issues like controlled burning in national forests fishing and hunting quotas and policy making for management of natural resources He looks at each of these cases in the light of past thinking and current research revealing how old myths often blind us to the new technology and to the ways of thinking we need to solve our environmental problems Above all Botkin is concerned with finding the delicate balance between man and nature that place where human needs and the intricate systems of nature can viably coexist Whether discussing moose herds on Isle Royale or Yosemite's famous Mariposa Grove of Sequoias Botkin writes vividly and insightfully about nature challenging us to rethink some of our most cherished notions Anyone who is concerned about the environment will find much here to ponder as well as the pleasure of meeting a stimulating and thoughtful mind at work **Ecology** ,1974
