Electrical Coronas Their Basic Physical:

Electrical Coronas Leonard B. Loeb, 2023-11-15 *Electrical Coronas Their Basic Physical Mechanisms* explores the fascinating and often overlooked phenomenon of electrical corona discharges which despite their seemingly inconspicuous nature play a crucial role in various industrial and scientific processes Ranging from small imperceptible glow discharges in air to larger glowing spheres such as St Elmo s fire coronas are vital to many applications including high tension power lines air pollution control and electrochemical processes These discharges also contribute to important technologies like Geiger counters and are utilized in processes such as dry process ore beneficiation and the discharging of statically electrified aircraft The study of coronas offers valuable insights into electrical breakdown in gases a key area of physics that has advanced significantly since the 1930s with improved experimental techniques The book provides an in depth analysis of corona discharges emphasizing their importance in understanding the processes of electrical breakdown in gases By examining these discharges which occur in highly asymmetrical electrical fields researchers can isolate and study the mechanisms of breakdown that are often obscured in more complex discharge processes This work is essential for both theoretical advancements in gaseous electronics and practical applications in engineering Key discoveries such as the Hermstein glow discharge and insights into the streamer mechanism of electrical sparks are discussed in detail The book also delves into the applications of corona discharges in devices like Geiger counters and the propagation of breakdown in coaxial cylindrical geometries making it an invaluable resource for those studying electrical discharges and their practical implications This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1965

Electrical Coronas Leonard Benedict Loeb, **Detection of Corona Discharge in Electric Networks** Yevgen Sokol, Vitalii Babak, Artur Zaporozhets, Oleg Gryb, Ihor Karpaliuk, 2023-10-13 The book is devoted to the solution of the problem of determining the presence of corona discharge on electrical equipment with acoustic radiation It is shown that corona discharge leads not only to irreversible losses of electrical energy but also interferes with the transmission of high frequency signals deteriorates insulating elements can become a source of conditions for the occurrence of a destructive arc discharge and is one of the factors of changing the continuity of the electrical system as a whole The book describes the processes in a corona discharge that lead to the occurrence of acoustic waves The authors analyzed acoustic radiation from a corona discharge reproduced in laboratory conditions The received acoustic signals were processed by Fourier transform Thus the features of the spectral function which belong specifically to the corona discharge in electrical networks with industrial frequency current were determined Based on the inverse Fourier transform a simplified model of the acoustic radiation of the corona discharge was constructed The authors proposed a method for detecting the

presence of a corona discharge based on the spectral characteristics of acoustic radiation Techniques were developed to determine the presence of a corona discharge for the creation of stationary and mobile devices The advantages of the method of detecting the presence of corona discharge by the acoustic spectrum are shown The method makes it possible to determine the presence of a corona discharge remotely even out of direct sight regardless of the time of day and regardless of the season The book states that determining the presence of a corona discharge is not enough it is still necessary to determine its location The method of finding the coordinates of the corona discharge as a source of sound was described Methods of searching for corona discharge coordinates with a fixed scanning device and a moving scanning device are proposed A UAV is proposed as a mobile platform for the scanning system The influence of the Doppler effect on acoustic measurements when the UAV speed changes was taken into account The authors have shown that the use of coronal discharge detection with UAVs will not only enable the prevention of coronal discharge but also increase the frequency of surface inspections This will allow timely measures to be taken to improve the reliability of the power system operation The book is intended for the researchers postgraduate students and students specialized in theory and calculations of electrical systems

The Electrical Nature of Storms D. R. MacGorman, W. D. Rust, 1998 Rapid progress during the last twenty years has created a host of new technologies for studying electrical storms including lightning mapping systems new radars satellite sensors and new ways of measuring electric field and particle charge This book explains how these advances have revolutionized our understanding The book provides substantial background material making it accessible to a broad scientific audience

Sustainable Production of Carbon Monoxide by Direct Current Gas Discharge Stephan Renninger, 2023-03-08 Carbon is the centerpiece in most chemicals and fuels In light of climate change non fossil paths to supply it are necessary Carbon monoxide is a key molecule for carbon utilization Forming it into hydrocarbons is an established process Gliding arc plasma sources can produce it by warm plasma which has high reactivity and space time yield at low energy input The first part of this work deals with the construction and characterization of two gliding arc plasma sources and driver circuits In the second part they are used to split CO into carbon monoxide and oxygen in a coaxial reactor utilizing a ceramic quench Two new plasma processes are presented in the third part as less energy intensive alternatives The calcination of carbonates and simultaneous splitting of CO by plasma as well as the gasification of organic solid waste coupled to reforming to syngas In the fourth part the processes are evaluated economically for a simplified example syngas to methanol plant
