Gibson,2007-06 Principles of the Manufacturing of Composite Materials Suong V. Hoa,2009

Based on 15 years of composites manufacturing instruction the Principles of the Manufacturing of Composite Materials is the first text to offer both a practical and analytic approach to composite manufacturing processes It ties together key tools for analyzing the mechanics of composites with the processes whereby composite products are fabricated whether by hand lay up or through automated processes The book outlines the principles of chemistry physics materials science and engineering and shows how these are connected to the design and production of a variety of composites primarily polymeric It thus provides analytic quantitative tools to answer the questions of why certain materials are linked with specific processes and why products are manufactured by one process rather than another All phases of matrix material formation are explained as are practical design details for fabrics autoclaving filament winding pultrusion liquid composite molding hand techniques joints and joint bonding and more A special section is devoted to nanocomposites The book includes exercises for university students and practitioners Methods of Design and Characterization of Materials, Research and Development of Technological Processes Yafang Han,Ying Wu,Guangxian Li,Fu Sheng Pan,Runhua Fan,Xuefeng Liu,2016-03-20

Bull, 1996 Composite materials are increasingly used in many applications because they offer the engineer a range of advantages over traditional materials They are often used in situations where a specified level of performance is required but where the cost of testing the materials under the extremes of those specifications is very high In order to solve this problem engineers are turning to computer Modelling to evaluate the materials under the range of conditions they are likely to encounter Many of these analyses are carried out in isolation and yet the evaluation of a range of composites can be carried out using the same basic principles In this new book the editor has brought together an international panel of authors each of whom is working on the analysis and Modelling of composite materials The coverage of the book is deliberately wide to illustrate that similar principles and methods can be used to model and evaluate a wide range of materials It is also hoped that by bringing together this range of topics the insight gained in the study of one composite can be recognized and utilized in the study of others Professional engineers involved in the specification and testing of composite material structures will find this book an invaluable resource in the course of their work It will also be of interest to those industrial and academic engineers involved in the design development manufacture and applications of composite materials
