**Algorithms to Live By** Brian Christian, Tom Griffiths, 2016-04-19 An exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind What should we do or leave undone in a day or a lifetime How much messiness should we accept What balance of the new and familiar is the most fulfilling These may seem like uniquely human quandaries but they are not Computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades And the solutions they've found have much to teach us In a dazzlingly interdisciplinary work Brian Christian and Tom Griffiths show how algorithms developed for computers also untangle very human questions They explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others From finding a spouse to finding a parking spot from organizing one's inbox to peering into the future Algorithms to Live By transforms the wisdom of computer science into strategies for human living

**Local Theories of Argument** Dale Hamble, 2021-03-25 Argumentation is often understood as a coherent set of Western theories birthed in Athens and developing throughout the Roman period the Middle Ages the Enlightenment and Renaissance and into the present century Ideas have been nuanced developed and revised but still the outline of argumentation theory has been recognizable for centuries or so it has seemed to Western scholars The 2019 Alta Conference on Argumentation co sponsored by the National Communication Association and the American Forensic Association aimed to question the generality of these intellectual traditions This resulting collection of essays deals with the possibility of having local theories of argument local to a particular time a particular kind of issue a particular place or a particular culture Many of the papers argue for reconsidering basic ideas about arguing to represent the uniqueness of some moment or location of discourse Other scholars are more comfortable with the Western traditions and find them congenial to the analysis of arguments that originate in discernibly distinct circumstances The papers represent different methodologies cover the experiences of different nations at different times examine varying sorts of argumentative events speeches court decisions food choices and sound explore particular personal identities and the issues highlighted by them and have different overall orientations to doing argumentation scholarship Considered together the essays do not generate one simple conclusion but they stimulate reflection about the particularity or generality of the experience of arguing and therefore the scope of our theories

**Responsible AI and Ethical Issues for Businesses and Governments** Vassileva, Bistra, Zwilling, Moti, 2020-10-16 The research surrounding artificial intelligence AI is vast and quite diverse in both its applied and theoretical fields AI tools and techniques such as machine learning data mining neural networks and advanced analytics are evolving at a high speed creating a consistent need for updated research This is especially relevant with frequent developments for the application of AI technology in many science and industry sectors This rapid expansion created a need for research that focuses on the questions surrounding the development of AI such as ethical

issues responsible AI methods and applications and its widespread implementation Within the answers to these questions is the prevailing notion that AI should be accountable explainable transparent and fair for all organizations and individuals Responsible AI and Ethical Issues for Businesses and Governments widens the understanding of AI outside of the narrow technical perspective to a broader viewpoint that embraces the links between AI theory practice and policy The chapters in this book discuss the basic philosophical and conceptual foundations of AI and explores the responsible application of AI tools and methods the moral aspects of AI practical issues and responsible AI implementation across a range of industries While highlighting topics that include digital transformation ethical competence information literacy in AI and the interaction between AI and humans this book is ideally designed for IT specialists technology developers technologists ethicists practitioners stakeholders academicians students and researchers who are interested in learning more about the ethical and responsible use of AI

**An Artificial History of Natural Intelligence** David W. Bates,2024-04-02 What would it mean to make a decision against the acceleration of automation and for humanity In An Artificial History of Natural Intelligence David W Bates lays the groundwork for such a decision by rethinking the history of human cognition and its entanglements with technology Tracing evolving lines of thought from the early modern period to the present Bates confronts the intimate connection between autonomy and automaticity in how we have understood the capacities of the human mind At the heart of this entanglement is a total mechanistic understanding of nature that began in the seventeenth century and saw the body as machine the nervous system as control mechanism and the brain as the center of cognition Reading varied thinkers from Descartes to Kant to Turing Bates reveals how new ideas and experiences reconfigured the ways in which the automaticity of the body could be linked with technical systems while at the same time the mind could still create the space for autonomy The result is a new theorization of the human in which the human dependent on technology produces itself as an artificial automation that has no natural origin

**Simple Heuristics that Make Us Smart** Gerd Gigerenzer,Peter M. Todd,ABC Research Group,2000-10-12 Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason limitless knowledge and all of eternity in which to ponder choices To understand decisions in the real world we need a different more psychologically plausible notion of rationality and

this book provides it It is about fast and frugal heuristics simple rules for making decisions when time is pressing and deep thought an unaffordable luxury These heuristics can enable both living organisms and artificial systems to make smart choices classifications and predictions by employing bounded rationality But when and how can such fast and frugal heuristics work Can judgments based simply on one good reason be as accurate as those based on many reasons Could less knowledge even lead to systematically better predictions than more knowledge Simple Heuristics explores these questions developing computational models of heuristics and testing them through experiments and analyses It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate dividing resources among offspring predicting high school drop out rates and playing the stock market As an interdisciplinary work that is both useful and engaging this book will appeal to a wide audience It is ideal for researchers in cognitive psychology evolutionary psychology and cognitive science as well as in economics and artificial intelligence It will also inspire anyone interested in simply making good decisions

**Digital Reading and Writing in Composition Studies** Mary R. Lamb, Jennifer M. Parrott, 2019-03-13 As digital reading has become more productive and active the lines between reading and writing become more blurred This book offers both an exploration of collaborative reading and pedagogical strategies for teaching reading and writing that reflect the realities of digital literacies This edited scholarly collection offers strategies for teaching reading and writing that highlight the possibilities opportunities and complexities of digital literacies Part 1 explores reading and writing that happen digitally and offers frameworks for thinking about this process Part 2 focuses on strategies for the classroom by applying reading theories design principles and rhetorical concepts to instruction Part 3 introduces various disciplinary implications for this blended approach to writing instruction What is emerging is new theories and practices of reading in both print and digital spaces theories that account for how diverse student readers encounter and engage digital texts This collection contributes to this work by offering strategies for sustaining reading and cultivating writing in this landscape of changing digital literacies The book is essential for the professional development of beginning teachers who will appreciate the historical and bibliographic overview as well as classroom strategies and for busy veteran teachers who will gain updated knowledge and a renewed commitment to teaching an array of literacy skills It will be ideal for graduate seminars in composition theory and pedagogy both undergraduate and graduate and teacher education courses and will be key reading for scholars in rhetoric and composition interested in composition history assessment communication studies and literature pedagogy

prepares students for the world of computing by giving them a solid foundation in the study of computer science algorithms. By taking an algorithm based approach to the subject this book helps readers grasp overall concepts rather than getting them bogged down with specific syntax details of a programming language that can become obsolete. Students work with algorithms from the start and apply these ideas to real problems that computers can help solve. The benefit of this approach is that students will understand the power of computers as problem solving tools, learn to think like programmers and gain an appreciation of the computer science discipline.
