Beginning Database Driven Application Development In Java Ee Using Glassfish:

Beginning Database-Driven Application Development in Java EE Yuli Vasiliev, 2009-04-21 Beginning Database Driven Application Development in Java™ EE Using GlassFish™ focuses on the open source GlassFish persistence engine. This book shows Java programmers how to develop applications utilizing relational database technologies with examples using Oracle and MySQL and the GlassFish application development framework and deployment platform all based on Java EE. The book explains in detail how you can organize your Java EE solution into a multilayer architecture placing most emphasis on how to implement the persistence and database tiers of an application. Through many examples this book shows how you can efficiently use the Java Persistence features available in the Java EE platform. Find out how you can greatly simplify the task of building the persistence layer of your Java EE application by moving some application logic into the underlying database utilizing database views, stored programs, and triggers. The book also explains how to deploy Java EE applications to GlassFish, a free open source Java EE 5 compliant application server.

Service Life Cycle Tools and Technologies: Methods, Trends and Advances Lee, Jonathan, Ma, Shang-Pin, Liu, Alan, 2011-11-30 As Service Oriented Computing (SOC) gains a wider global acceptance, the need for understanding its life cycle becomes inevitable not only for developers but also for users. Service Life Cycle Tools and Technologies: Methods, Trends and Advances compiles the latest research on SOC life cycles, detailing methodologies and applications in this emerging field. The development of service oriented applications not only depends on constructing service providers but also composition and delivery. Service requesters, service providers, and developers alike will benefit from the views and models in a service life cycle. This volume offers research that has been conducted in both industry and academia to address issues in the SOC domain, including service discovery, service composition, and service management. It serves as a vital reference for those on either side of the service field.

Java EE 5 Development Using GlassFish Application Server David R. Heffelfinger, 2007 This is a guide to developing Java EE 5 applications deployed to the high performance Java EE 5 compliant GlassFish application server, which is quickly gaining massive popularity. After GlassFish installation and configuration, it covers application development including all major Java EE 5 APIs: JSPs, JSTL, Servlets, and JSF for web applications; the Java Persistence API and JDBC to interact with RDBMS; EJB 3 including container managed transactions and EJB declarative security through annotations; the JMS API for messaging; the JAAS API for secure applications; frameworks built on the Java EE 5 specification including Seam, Facelets, and Ajax4jsf. It is aimed at Java developers wishing to become proficient with Java EE 5 who are expected to have some experience with Java and J2EE technologies and to have developed and deployed applications in the past but need no previous knowledge of Java EE and will teach the reader how to use GlassFish to develop and deploy applications.
