Intext Questions 18.5

Question 1:

List some uses of satellites.

Answer 1:

Artificial satellites are used in communications, mapping the Earth, studying geographical features, and astronomy.

Question 2:

If a satellite equipped with cameras remains fixed at one height above ground even as earth rotates and moves in its orbit, what is its possible use?

Answer 2:

If the satellite is stationary and the Earth continues to rotate on its axis and rotate in its orbit, the views provided by the satellite will keep changing. Therefore, without changing the position of the satellite, the entire area of the Earth can be seen through the camera mounted on the satellite.

Question 3:

Arrange the low orbit, geostationary and polar satellites in decreasing order of altitude above Earth (the highest one comes first).

Answer 3:

Geostationary, polar and low earth orbit satellites. Of these, the height of geostationary satellite is approximately 36000 km. Polar satellites are below that and low earth orbit satellites are at the lowest (16-1400 km).

Question 4:

Which of the satellites are preferred for communication application?

Answer 4:

Geostationary satellites are preferred for communication applications. This is because from Earth these satellites appear stable at one place. Therefore, if the antenna is arranged once in this direction, we will not need to adjust it again and again.
