Erosion and Deposition

What 3 major factors affect erosion and sediment load? (15 points)

- Slope---the more steep the slope the faster the water will flow which speeds up erosion and increases sediment load
- volume of flow--moving water also increases erosion and sediment load
- streambed shape—a shallow and/or rocky bottom will slow down the water which will lower erosion and sediment load. Wider streams also lower erosion rate and sediment load which is why deltas are found at the mouth of rivers.
