Process Equipment and Plant Design Subhabrata Ray, Gargi Das, 2020-05-29 Process Equipment and Plant Design Principles and Practices takes a holistic approach towards process design in the chemical engineering industry dealing with the design of individual process equipment and its configuration as a complete functional system Chapters cover typical heat and mass transfer systems and equipment included in a chemical engineering curriculum such as heat exchangers heat exchanger networks evaporators distillation absorption adsorption reactors and more The authors expand on additional topics such as industrial cooling systems extraction and topics on process utilities piping and hydraulics including instrumentation and safety basics that supplement the equipment design procedure and help to arrive at a complete plant design The chapters are arranged in sections pertaining to heat and mass transfer processes reacting systems plant hydraulics and process vessels plant auxiliaries and engineered safety as well as a separate chapter showcasing examples of process design in complete plants This comprehensive reference bridges the gap between industry and academia while exploring best practices in design including relevant theories in process design making this a valuable primer for fresh graduates and professionals working on design projects in the industry Serves as a consolidated resource for process and plant design including process utilities and engineered safety Bridges the gap between industry and academia by including practices in design and summarizing relevant theories Presents design solutions as a complete functional system and not merely the design of major equipment Provides design procedures as pseudo code flow chart along with practical considerations

Unit Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each

subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies
