*Creative Solutions for a Sustainable Development* Yuri Borgianni, Stelian Brad, Denis Cavallucci, Pavel Livotov, 2021-09-15 This book constitutes the refereed proceedings of the 21st International TRIZ Future Conference on Automated Invention for Smart Industries TFC 2021 held virtually in September 2021 and sponsored by IFIP WG 5.4 The 28

full papers and 8 short papers presented were carefully reviewed and selected from 48 submissions They are organized in the following thematic sections inventiveness and TRIZ for sustainable development TRIZ intellectual property and smart technologies TRIZ expansion in breadth and depth TRIZ data processing and artificial intelligence and TRIZ use and divulgation for engineering design and beyond Chapter Domain Analysis with TRIZ to Define an Effective Design for Excellence is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](http://springer.com)

*Automatic Parallelization* Christoph W. Kessler,2012-12-06 Distributed memory multiprocessing systems DMS such as Intel s hypercubes the Paragon Thinking Machine s CM 5 and the Meiko Computing Surface have rapidly gained user acceptance and promise to deliver the computing power required to solve the grand challenge problems of Science and Engineering These machines are relatively inexpensive to build and are potentially scalable to large numbers of processors However they are difficult to program the non uniformity of the memory which makes local accesses much faster than the transfer of non local data via message passing operations implies that the locality of algorithms must be exploited in order to achieve acceptable performance The management of data with the twin goals of both spreading the computational workload and minimizing the delays caused when a processor has to wait for non local data becomes of paramount importance When a code is parallelized by hand the programmer must distribute the program s work and data to the processors which will execute it One of the common approaches to do so makes use of the regularity of most numerical computations This is the so called Single Program Multiple Data SPMD or data parallel model of computation With this method the data arrays in the original program are each distributed to the processors establishing an ownership relation and computations defining a data item are performed by the processors owning the data

*Proceedings* ,2003 The ASE conference is the major conference for theory and practice concerned with automating the software development process Formerly known as Knowledge Based Software Engineering KBSE the conference expanded in order to reach out to other scientific communities concerned with the automation aspects of formal methods software process human computer interaction requirements engineering reverse engineering testing and verification and validation while still including an active artificial intelligence and knowledge based research focus

Parallel Architectures and Compilation Techniques Michel Cosnard,Guang R. Gao,Gabriel M. Silberman,1994 Fine and medium grain parallelism continues to hold its own as a vital vibrant research topic Within the area new developments in superscalar and VLIW architectures and their associated compilation techniques have provided exciting new avenues to extract performance from a slowing technology curve Comprising 28 full length papers and a number of short poster papers this publication offers a high quality exploration of the current state of the art in the field It will be of particular interest to those involved in control structures and microprogramming processor architectures computer system implementation programming techniques and software engineering
