[Python Machine Learning For Beginners](#) Finn Sanders, 2019-05-22

Imagine a world where you can make a computer program learn for itself. What if it could recognize who is in a picture or the exact websites that you want to look for when you type it into the program? What if you were able to create any kind of program that you wanted, even as a beginner programmer, without all of the convoluted codes and other information that makes your head spin? This is actually all possible. The programs that were mentioned before are all a part of machine learning. This is a breakthrough in the world of information technology which allows the computer to learn how to behave rather than asking the programmer to think of every single instance that may show up with their user ahead of time. It is taking over the world, and you may be using it now without even realizing it. If you have used a search engine, worked with photo recognition, or done speech recognition devices on your phone, then you have worked with machine learning. And if you combine it with the Python programming language, it is faster, more powerful, and easier, even for beginners, to create your own programs. Today, Python is considered the ultimate coding language for beginners, but once you start to use it, you will never be able to tell

Many of the best programs out there use this language behind them and if you are a beginner who is ready to learn this is a great place to start.
