An internal combustion engine IC engine refers to a type of heat engine wherein the combustion of fuel occurs with the help of an oxidizer in the combustion chamber which is a significant part of the working fluid circuit The expansion of the high pressure and high temperature gases generated through combustion puts direct force on certain components of an IC engine Usually the force is applied to turbine blades pistons a nozzle or a rotor The component is moved across a distance by this force which converts chemical energy into kinetic energy which is further utilized to propel power or move whatsoever the
